Lab Manual For Web Programming:

Web Programming and Internet Technologies Porter Scobey, Pawan Lingras, 2016-09-12 Web Programming and Internet Technologies An E Commerce Approach is written for the one term web programming course for first or second year students. It features a hands on learning approach where students are provided with information on a need to know basis. The text provides a running case study throughout and students then take the topics taught in each chapter and apply them to the development of an e commerce website. At the end of the text students will have a fully functional e commerce site.

Web Programming and Internet Technologies Porter Scobey, Pawan Lingras, 2012-02-15 Today's Web programmers are required to understand and use the tools and skills for both client and server side programming. Web Programming and Internet Technologies An E Commerce Approach provides an accessible comprehensive introduction to creating fully functioning websites with e commerce capabilities. Ideal for the one term course or as a self learning guide for professionals, the authors weave a continuing case study of a real world commercial enterprise throughout the text that gradually grows in sophistication. Introductory chapters ask readers to create a simple website that uses the basic features of XHTML. Readers will continue to modify and expand their early work creating a centralized mechanism for changing the look and feel of the site via cascading style sheets and incorporating JavaScript, PHP, MySQL and much more. A CD ROM is included with every new printed copy of the text and includes complete and pre tested XHTML and CSS markup for all web pages discussed as well as all associated JavaScript and PHP scripts and the data for setting up the MySQL database. With its hands on active learning approach, students using this new full color text will see and experience first hand the many levels and capabilities of programming for the world wide web.

Key Features: Based on a real business model, this text provides a comprehensive introduction to all aspects of creating a complete website with e commerce capabilities. Uses a project based approach that asks readers to develop a website whose functionality will parallel that of the real world case study in the text. Includes examples and screen shots of real websites throughout for readers to reference. Presents and utilizes mainstream and relevant open source and widely used technologies: XHTML, CSS, JavaScript, PHP, MySQL, XML and more. Every chapter concludes with a collection of activities to assure the reader has a full understanding of the chapter material. These activities include quick questions to test the reader's basic knowledge of the content, short exercises to improve basic understanding, exercises on the parallel project that guide the reader through creating his/her own fully functional commercial website, a section titled "What Else You May Want or Need to Know" containing additional information relevant to the chapter, and finally a reference section with links to websites for further details and explanations of the topics covered in the chapter. The accompanying CD ROM contains complete and pre tested XHTML and CSS markup for all web pages discussed in the text as well as all associated JavaScript and PHP scripts and the data for setting up the MySQL database. eBook version does not include the CD ROM.

Experiments in Java Samuel A. Rebelsky, 2000 This lab manual is appropriate for any Introduction to

Programming course that uses the Java programming language Its hands on exercises are intended to help students improve their understanding of the fundamental structures in Java The order of the topics in this manual reflects an objects first approach with the goal of helping students understand the object oriented paradigm This manual is divided into three parts The first part presents the core of the Java language These six sessions provide experience with core features and principles of the Java programming language They provide enough breadth and depth for readers to learn more of Java on their own or in later courses The second part of the manual helps students explore issues pertaining to algorithms Recursion is considered here as well important searching algorithms Finally methods of algorithm analysis are examined The final part of the manual covers a number of additional topics that are not described in the core sessions such as graphics inheritance and object design Features Includes eighteen laboratories each with Introductory Material New Skills that students will develop in the exercise Prerequisite Skills to ensure students are prepared for the session Required Files to use modify and extend in the exercises Discussion of topics covered in the laboratory session Experiments to reinforce the discussion Post Laboratory Problems to enhance understanding Notes on selected problems Focuses on applications but includes optional material on applets Provides an objects first approach to working with Java Written on the Java 2 platform Designed to work with any Java textbook 0201612674B04062001
