**Concepts in Turbocharging for Improved Efficiency and Emissions Reduction** Mehrdad Zangeneh, 2014-09-22  
Legislative requirements to reduce CO2 emissions by 2020 have resulted in significant efforts by car manufacturers to explore various methods of pollution abatement. One of the most effective ways found so far is by shortening the cylinder stroke and downsizing the engine. This new engine then needs to be boosted or turbocharged to create the full and original load torque. Turbocharging has been and will continue to be a key component to the new technologies that will make a positive difference in the next generation engines of years to come. **Concepts in Turbocharging for Improved Efficiency and Emissions Reduction** explores the many ways that turbocharging will deliver concrete results in meeting the new realities of sustainable green transportation. This collection of very focused technical papers selected by Mehrdad Zangeneh, PhD, a professor of thermo fluids at University College in London, provides an assessment of several novel designs intended to improve fuel consumption and cap emissions while maintaining torque at all speeds. The book is divided into four sections, each addressing the most cutting edge technologies on the market today: o Two Stage Turbocharging o Variable Geometry Compressors o Unconventional Compressor Configurations o Electrically Assisted Turbocharging. Topics featured in this book include: Fundamental aspects of design and operation of turbocharged engines; Electric turbocharger usage in F1; Turbocharged engine research by Toyota, SwRI, and US EPA; Honda and Caterpillar.
