

FLANGED EXTERNAL CAGE

Liquid float
level switches

INSTRUCTION MANUAL AND REPLACEMENT PARTS

DESCRIPTION

External cage type level switches are completely self-contained units designed for side mounting to a tank or vessel with threaded or flanged pipe connections. These switches have thoroughly demonstrated their worth for years in hundreds of industrial applications — particularly in the fields of petroleum refining, petro-chemical production and power generation.

OPERATING PRINCIPLE

A permanent magnet (1) is attached to a pivoted switch actuator (2). As the float/displacer (3) rises following the liquid level, it raises the attraction sleeve (4) into the field of the magnet, which then snaps against the non-magnetic enclosing tube (5), actuating the switch. The enclosing tube provides a static pressure boundary between the switch mechanism and the process. On a falling level, an internal spring retracts the magnet, deactivating the switch.

UNPACKING

Unpack the instrument carefully. Inspect all units for damage. Report any concealed damage to carrier within 24 hours. Check the contents of the packing slip and purchase order. Check and record the serial number for future reference when ordering parts.
