Managing Water As An Economic Resource Development Policy Studies Series:

Managing Water as an Economic Resource James Winpenny, 2005-07-22 Water already a scarce resource is treated as though it were plentiful and free The task of supplying enough water of the required quality to growing populations is straining authorities and governments to the limit as the economic and environmental costs of new supply sources escalate and wasteful supply delivery and consumption systems persist Managing Water as an Economic Resource argues that the root of the crisis is the failure of suppliers and consumers to treat water as a scarce commodity with an economic value James Winpenny evaluates policies for the improved management of existing demand and draws on case studies from different countries as he discusses how policies could be implemented to treat water as an economic good conferring major economic financial and environmental benefits

Politics and Policies for Water Resources Management in India M. Dinesh Kumar, 2020-06-29 This comprehensive volume explores the interface between politics and policy making in the water management sector of India The authors discuss the nature of the political discourse on water management in India and what characterizes this discourse They also explore how this discourse has influenced the process of framing water related policies in India particularly through the academics bureaucrat politician nexus and the growing influence of the civil society groups on policy makers which are the defining feature of this process and which have produced certain policy outcomes that are not supported by sufficient scientific evidence The book reveals that the social and management sciences despite being increasingly relevant in contemporary water management are unable to impress upon traditional engineer dominated water administration to seek solutions to complex water problems owing to a lack of interdisciplinary perspective in their research The authors also examine the current deadlock in undertaking sectoral reforms due to existing water policies not being honoured This collection includes several research studies which suggest legal institutional policy alternatives for addressing the problems in areas such as irrigation rural and urban water supply flood control and adaptation to climate variability and change It was originally published as a special issue of the International Journal of Water Resources Development

Treatise on Water Science, 2010-09-01 Water quality and management are of great significance globally as the demand for clean potable water far exceeds the availability Water science research brings together the natural and applied sciences engineering chemistry law and policy and economics and the Treatise on Water Science seeks to unite these areas through contributions from a global team of author experts The 4 volume set examines topics in depth with an emphasis on innovative research and technologies for those working in applied areas Published in partnership with and endorsed by the International Water Association IWA demonstrating the authority of the content Editor in Chief Peter Wilderer a Stockholm Water Prize recipient has assembled a world class team of volume editors and contributing authors Topics related to water resource management water quality and supply and handling of wastewater are treated in depth Water Pricing and Public-Private Partnership Asit Biswas, Cecilia Tortajada, 2014-04-10 There is no question that water pricing and public

private partnership can improve water management practices in the future. However, this concept is neither the cure all many proponents argue nor the disaster its opponents forecast. Providing a comprehensive and objective assessment of what does and does not work, where, why, and under what circumstances, this informative collection assesses the social, economic, equity, and institutional implications. This cohesive set of carefully selected essays, the result of The Third World Centre for Water Management and the Inter American Development Bank's decision to objectively and critically assess the experiences in these areas, transcends the current dogmatic debate on these complex issues. Providing an in-depth analysis and assessment of the main issues and constraints of water pricing, private sector participation, and their affect on water supply, the collection draws on illustrative case studies from Argentina, Brazil, the USA, and Western European countries amongst others. This is a special issue of the Journal of Water Resource Development.

Water Management, Food Security and Sustainable Agriculture in Developing Economies M. Dinesh Kumar, M. V. K. Sivamohan, Nitin Bassi, 2013. This book addresses strategies for food security and sustainable agriculture in developing economies. The book focuses primarily on India, a fast developing economy whose natural resource base comprising land and water supporting agricultural production is not only under enormous stress but also complex and not amenable to a uniform strategy. It critically reviews issues which continue to dominate the debate on water management for agricultural and food production. The book examines the validity of the claim that large water resources projects cause serious social and environmental damages using global and national datasets. The authors examine claims that the future of Indian agriculture is in rain fed farming supported by small water harvesting. They question whether water abundant eastern India could become the granary of India through a groundwater revolution with the right policy inputs. In the process, they look at the less researched aspect of the food security challenge which is land scarcity in eastern India. The book analyzes the physical, economic, and social impacts of large scale adoption of micro irrigation systems using a farming system approach for north Gujarat. Through an economic valuation of the multiple use benefits from tank systems in western Orissa, it shows how value of water from large public irrigation systems could be enhanced. The book also looks at the reasons for the limited success in bringing about the much needed institutional reforms in canal irrigation for securing higher productivity and equity using case studies of Gujarat, Madhya Pradesh, and Maharashtra. Finally, it addresses how other countries in the developing world, particularly Sub Saharan Africa, could learn from Indian experience.

Water Resources Sector Strategy, 2004-01-01. This paper focuses on how to improve the development and management of water resources while providing the principles that link resource management to the specific water using sectors. In 1993, the Board of the World Bank endorsed a Water Resources Management Policy Paper. In that paper, and this Strategy, water resources management is seen to comprise the institutional framework, management instruments, and the development, maintenance, and operation of infrastructure. The paper looks at the dynamics of water and development. It builds on the 1993 policy paper, evaluating current scenarios and looking at future options and their
