A Research Plan and Report on Factors Affecting Culvert Pipe Service

Life in Minnesota Craig A. Taylor, Jeff Marr, Minnesota. Department of Transportation. Research Services Section, University

of Minnesota. St. Anthony Falls Laboratory, 2012 Culvert pipe material selection has traditionally been a relatively simple

task involving metal or concrete pipe In recent years the addition of coated metal and plastic pipe has led the federal

government to implement a rule requiring the consideration of alternative pipe materials The current MnDOT Drainage

Manual provides limited guidance on the selection of pipe material The manual is lacking detailed information on the

influence of environmental conditions on pipe durability in Minnesota It is necessary to provide updated accurate information

on pipe material and durability for factors directly related to Minnesota To reach this goal the availability and suitability of

existing data as well as the practices associated with predicting pipe life spans must be evaluated This report is the result of

the initial feasibility study for a larger project's to update the MnDOT Drainage Manual The goal for this report is to identify

knowledge gaps produce a research plan that will guide future research and draw any pipe materials conclusions possible

using the data available *US 14/52, Reconstruction Between Olmsted CSAH 14 (75th St NW) and TH-63 (Broadway), City*
