Fertility, Living Arrangements, Care and Mobility John Stillwell, Ernestina Coast, Dylan Kneale, 2009-06-12 Many parts of the world are experiencing rapid demographic restructuring resulting in an ageing population with increasingly significant work and care pressures on cohorts less able or willing to provide support This book examines some of the important trends that have underpinned reductions in fertility including delayed child bearing and increased childlessness It demonstrates how relationships between partners have resulted in new living arrangements with changing attitudes from marriage to co habitation as the social norm and it considers the health and well being for particular at risk groups such as the elderly and stepparents as well as aspects of mobility such as household migration and commuting to school The book brings together a series of studies that all involve quantitative analyses of secondary data from censuses surveys or administrative records The trends and patterns reported provide new and interesting insights into behaviour of the household and the roles of adults and children and point to questions of critical importance for practitioners and policy makers *The Times Index* , 2008 Indexes the Times and its supplements **Rigby Moving Into Maths** , 1983
