

## Chapter 1 Engineering and Management

### DISCUSSION QUESTIONS

- 1-1. Q:** The precursors of today's engineers listed in the quotation from Wickenden had no classes and few or no books from which to learn scientific principles. How can you explain their success?

**A:** Certainly there was a great deal of trial and error, and lessons learned were passed on through long apprenticeship to the masters of such knowledge as existed in the field. Knowledge migrated slowly with the travels of artisans, and centers of unrecorded knowledge could disappear in the wake of conquerors or natural disaster. Nonetheless, the discoveries of some early thinkers (such as that of density measurement by Archimedes) were recorded for posterity, but progress was slow. In the Renaissance the leaders of scientific discovery in Europe maintained a correspondence with each other, and the written documentation of science and scientific progress began to accelerate.

- 1-2. Q:** What are the different dimensions of the terms *engineering* and *management*? Discuss.

**A:** The fields of engineering and management have multiple dimensions associated with them. A few of these dimensions are listed below.

**Engineering**—Having technical knowledge of the entire product and/or process, planning, ideating, designing, prototyping, testing and/or inspecting, analyzing, defining standard operating procedures, etc.

**Management**—Managing human resources, coordinating activities, allocating resources, making decisions, planning schedules, managing risks, etc.

Other opinions can be elicited from students during discussions.

- 1-3. Q:** Why is it so important for an engineer today to have knowledge of multiple disciplines in addition to his field of expertise?

**A:** In today's rapidly changing business environment, an engineer must have knowledge of multiple disciplines in addition to his field of expertise. Many of today's products are designed and developed using knowledge gathered from various disciplines. For example, present-day washing machines are designed according to principles related to ergonomics, socioeconomics, and consumer behavior in addition to the principles of mechanical engineering. Therefore, engineers with knowledge of all these diverse disciplines are better equipped to create washing machines for the competitive global market than engineers who are adept at their field of expertise alone.

- 1-4. Q:** What are the different roles that an engineer needs to play in a firm in addition to the traditional roles of design, development, and testing?

**A:** In addition to their traditional roles, engineers today have to perform various other roles. Some of these roles are listed below:

**Information manager and decision maker**—Managing people, disseminating and assimilating information, and taking decisions

**Knowledge manager**—Assimilating knowledge in both tacit and implicit forms
