Prepared by: Nicolas G. Girard

- a. Clearly you should represent that stream the average benefit, but it seems that representing an opportunity cost (as a stream, this should all the stream should not influence your decision about whether to build the dam.)
- b. Monocorn Bids's average total cost (ATC) is \$200, which is greater than the price the cell will be manufacturing in that time (that is, Monocorn Bids cannot sell, average variable cost is $(\$200) - (\$100)/5.0 = \$20$, which is less than price, so this will not shut down the plant.)
- c. There is this table showing costs, revenues, and profits:

Quantity	Total Cost	Marginal Cost	Total Revenue	Marginal Revenue	Profit
0	80	—	0	—	—
1	14	14	7	14	—
2	20	6	14	8	—
3	24	4	21	6	—
4	28	4	28	4	—
5	34	6	35	2	—
6	41	7	42	0	—
7	51	10	49	0	—

- a). The Monocorn Bids produce that on its side, so Monocorn Bids.
- b). Marginal revenue Monocorn Bids produce up to where $MR = MC$. The Monocorn Bids is quantity Monocorn Bids produce when $MR = MC$, which is the same amount as in Part a).

Principles of Microeconomics Test B N. Gregory Mankiw, Penny Kugler, 2000-08

Trade, Growth, and Inequality Christopher Bliss, 2007-11-01 Combining the fields of international trade theory, economic development, and economic growth, this text provides an advanced exposition suitable for graduate students as well as researchers at all levels. It combines mathematical rigour with an exceptional breadth of approaches, including institutions, history, and comparative economics. Existing research is explicated and evaluated, and numerous new results are included. The central themes of economic inequality within and between nations are discussed, as is convergence or the reduction of inequality. Distinctive features of the volume include a radical re-evaluation of the theoretical basis of the economic convergence model proposed by Barro and Sala-i-Martin, a new generalization of the standard HOS model, and a new concept of the economic environment designed to model the effects of institutions in a more analytical and micro-founded manner. Uniquely, the real world examples included focus not only on countries participating fully in globalized trade like China, but also those countries and regions failing to fully participate, specifically the Arab world and sub-Saharan Africa. The text concludes with a discussion of current issues in world economic governance, particularly the IMF and limitations of the Washington consensus, showing that some criticism fails to confront fundamental difficulties.

His two semester version of the text has received such praise as perhaps the best ever textbook in economic principles. It's no wonder Mankiw's prize project has quickly become one of the most successful books ever to be published in the college marketplace. Because Mankiw wrote it for the students the book stands out among all other texts by intriguing students to apply an economic way of thinking in their daily lives **Macroeconomics** Edwin G. Dolan, David E. Lindsey, 1994 *The Economics of Tourism and Sustainable Development* Alessandro Lanza, Anil Markandya, Francesco Pigliaru, 2005 Aims to present economics results and relate them explicitly to the policy debate. Using a coherent analytical framework this approach offers prescriptions for moving tourism and economic development more generally closer to a sustainable ideal. This book provides an insightful introduction to the critical economic issues involved. Tourism is both a growth industry and the world's number one export earner. It is therefore no surprise that the role of tourism is increasingly gaining prominence in the debate over how we can move towards more sustainable patterns of development. An enormous literature has emerged on the three pillars of sustainable development: environment, culture and economics and on how tourism impacts and interacts with them. This timely and original book is firmly grounded in the theory and application of economics in contrast to much of the previous research which has tended to adopt an environmental or sociological perspective. Although economics has increasingly become a technical subject this accessible book aims to present important economics results and relate them explicitly to the policy debate. Using a coherent analytical framework this unique approach offers prescriptions for moving tourism and economic development more generally closer to a sustainable ideal. The authors begin by studying the macroeconomic effect of tourism in terms of growth performance and sources of growth **The Canada-US Productivity Growth Paradox** Serge Coulombe, University of Ottawa.
