Modeling Using Creo Parametric 2.0 Sridhar S. Condoor, 2013 Modeling with Creo Parametric 2 0 synergistically integrates the design process with the specific commands and procedures of Creo Parametric 2 0 through a unique presentation scheme Users are first provided with the information about the design part or assembly and its design intent Then they see an overview of steps involved in modeling the part assembly This is accompanied by detailed instructions showing goals steps and commands in a four column presentation The consistent approach is supplemented by many illustrations on each page Each chapter adds new information while reinforcing key concepts

Creo Parametric 7.0 Tutorial Roger Toogood, 2020-08 The eleven lessons in this tutorial introduce you to the design capabilities of Creo Parametric 7 0 The tutorial covers the major concepts and frequently used commands required to advance from a novice to an intermediate user level Major topics include part and assembly creation and creation of engineering drawings Also illustrated are the major functions that make Creo Parametric a parametric solid modeler Although the commands are presented in a click by click manner an effort has been made in addition to showing illustrating the command usage to explain why certain commands are being used and the relation of feature selection and construction to the overall part design philosophy Simply knowing where commands can be found is only half the battle As is pointed out numerous times in the text creating useful and effective models of parts and assemblies requires advance planning and forethought Moreover since error recovery is an important skill considerable time is spent exploring the created models In fact some errors are intentionally induced so that users will become comfortable with the debugging phase of model creation At the end of each lesson is a short quiz reviewing the new topics covered in that chapter Following the quiz are several simple exercise parts

that can be created using new commands taught in that lesson In addition to these an ongoing project throughout the book is also included This project consists of several parts that are introduced with the early lessons and finally assembled at the end Who this book is for This book has been written specifically with students in mind Typically students enter their first CAD course with a broad range of abilities both in spatial visualization and computer skills The approach taken here is meant to allow accessibility to persons of all levels These lessons therefore were written for new users with no previous experience with CAD although some familiarity with computers is assumed Parametric Modeling with Creo Parametric 2.0 Randy H. Shih,2013 The primary goal of Parametric Modeling with Creo Parametric 2 0 is to introduce the aspects of Solid Modeling and Parametric Modeling This text is intended to be used as a training guide for any student or professional wanting to learn to use Creo Parametric This text covers Creo Parametric and the lessons proceed in a pedagogical fashion to guide you from constructing basic shapes to building intelligent solid models and creating multi view drawings This text takes a hands on exercise intensive approach to all the important Parametric Modeling techniques and concepts This textbook contains a series of eleven tutorial style lessons designed to introduce beginning CAD users to Creo Parametric The basic premise of this book is that the more designs you create using Creo Parametric the better you learn the software With this in mind each lesson introduces a new set of commands and concepts building on previous lessons This book will provide you with a good basis for exploring and growing in the exciting field of Computer Aided Engineering
