Detailing Worlds
Eric Bellin, 2025-02-06 In the 21st century the word detail appears constantly in discussions of building and we use it in many different ways yet just over 250 years ago detail meant nothing at all particular to the work of architects engineers or builders Detailing Worlds is the first book to examine the origins and evolution of detail as a concept with meanings specific to practices of building By exploring how past meanings and roles were ascribed to detail in different worlds of practice those of academics technicians students engineers and architects Detailing Worlds looks to the future illuminating the ways disciplinary knowledge and the concepts on which it is based evolve and change over time It is a story about how such concepts are slowly but constantly reconceived redefined and transformed by individuals as they interact with one another and how this process is shaped by the ever changing sociocultural and technological dimensions of the world around us Richly illustrated with more than 200 images including figures from rare texts archival student drawings and practitioners construction documents from the 18th through 20th centuries Detailing Worlds ventures to tell the history of a disciplinary specific idea and offer insights about how we think and speak about the practice of building today *France* Jean-Louis Cohen, 2014-08-15 Everyone knows Notre Dame the Eiffel Tower and the chateaux of the Loire Valley but French architects have also produced some of the most iconic buildings of the twentieth century playing a central role in the emergence and development of modernism In France Jean Louis Cohen presents a complete narrative of the unfolding architectural modernity in the country grappling not only with the buildings but also with the political and critical context surrounding them Cohen examines the developments in urban design and architecture within France depicting the continuities and breaks in French architecture since 1900 against a broader international background Describing the systems of architectural exchange with other countries including Italy Germany Russia and the United States he offers a new view on the ideas projects and buildings otherwise so often considered only from narrow nationalistic perspectives Cohen also maps the problematic search for a national identity against the background of European rivalries and France's colonial past Drawing on a wealth of recent research this authoritatively written book will challenge the way design professionals and historians view modern French architecture

In Foreign Lands: The Migration of Scientists for Political or Economic Reasons Maria Teresa Borgato, Christine Philp, 2022-04-13 This proceedings volume collects the stories of mathematicians and scientists who have spent and developed parts of their careers and life in countries other than those of their origin The reasons may have been different in different periods but were often driven by political or economic circumstances The lack of suitable employment opportunities in their home countries adverse political systems and wars have led to the emigration of scientists The volume shows that these movements have played an important role in spreading scientific knowledge and have often changed the scientific landscape tradition and future of studies and research fields The book analyses in particular aspects of Euler's Lagrange's and Boscovich's scientific biographies migrations of scientists from France Spain and Greece to

Russia in the eighteenth and nineteenth centuries and from Russia to France in the twentieth century exiles from Italy before the Italian Risorgimento migrations inside Europe and the escape of mathematicians from Nazi fascist Europe between the two World Wars as well as the mobility of experts around the world It includes selected contributions from the symposium In Foreign Lands The Migration of Scientists for Political or Economic Reasons held at the Conference of the International Academy of the History of Science in Athens September 2019 Bibliographie D'histoire de L'art ,1998 *The Tyranny of the Straight Line* Min-Kyung Lee,2024-04-02 A revolutionary study of nineteenth century Parisian cartography and its role in shaping a modern conception of space Maps are rarely given the same attention as other print media or art forms in urban history Author Min Kyung Lee shows their rich potential in this lavishly illustrated study which brings together maps and other archival materials along with drawings and paintings She works across disciplines to examine mapping practices in the development of nineteenth century Paris and the transformative role that urban mapping had on the city s modernization Lee investigates Paris s formation as a modern city ultimately framing the practice of cartography as a catalyst for the emergence of new spatial and compositional theories Beginning with an examination of the emblematic urban plan that Napol on III gave to the prefect of the Seine Georges Eug ne Haussmann in 1853 Lee explores the significance of the map itself the means of its production through surveying the methods of its use and reception by architects engineers and administrators and its place in the visual culture of Paris s modernization At the heart of this exploration is a focus on orthography in architecture and the new quality of exactitude in modern mapping practices The precise grid structure of orthographic maps and plans evinced a sense of objectivity yet it was not without political context and social consequences as Lee demonstrates throughout *Le Moniteur architecture AMC.* ,1998 **Avery Index to Architectural Periodicals** Avery Library,1997 *Journal of the Society of Architectural Historians* Society of Architectural Historians,1999 Includes special issues Le Moniteur architecture ,1998 **Architectural Publications Index** ,1998 Birkhäuser Architectural Guide Bertrand Lemoine,2000 In the 20th century France has proved astonishingly fertile ground for modern architecture The architectural ideas of Modernism and the avant garde are firmly rooted here and dominate the French architectural landscape unlike in any other country Her architects are acclaimed throughout the world Paris a center for international architecture rightly forms the focus of this guidebook with more than 100 notable buildings However this guidebook also does justice to the entire country with more than 450 buildings from all regions The buildings are documented with photographs drawings and texts providing a comprehensive and portable guide **Les Cahiers de la recherche architecturale et urbaine** ,2002 Architecture Philip Jodidio,2006 The relationship between contemporary architecture and nature is fundamental to today s creativity Some architects reject nature or imagine that they can create an artificial world of their own while others are seeking new ways aided by science and the computer to chart new directions for the buildings of tomorrow From ecologically oriented designs to the most astonishing new forms this book shows how essential nature remains to architecture BOOK
