Handbook on Project Management and Scheduling Vol. 2 Christoph Schwindt, Jürgen Zimmermann, 2015-01-13 Due to the increasing importance of product differentiation and collapsing product life cycles, a growing number of value adding activities in the industry and service sector are organized in projects. Projects come in many forms, often taking considerable time and consuming a large amount of resources. The management and scheduling of projects represents a challenging task, and project performance may have a considerable impact on an organization's competitiveness. This handbook presents state-of-the-art approaches to project management and scheduling. More than sixty contributions written by leading experts in the field provide an authoritative survey of recent developments. The book serves as a comprehensive reference both for researchers and project management professionals. The handbook consists of two volumes. Volume 1 is devoted to single modal and multi modal project scheduling. Volume 2 presents multi project problems, project scheduling under uncertainty and vagueness, managerial approaches, and a separate part on applications, case studies, and information systems. *Practice and Theory of Automated Timetabling*, 2000 **Applications of Evolutionary Computing** Stefano Cagnoni, Jens Gottlieb, Emma Hart, Martin Middendorf, Günther R. Raidl, 2003-07-31 This book constitutes the refereed proceedings of three workshops on the application of evolutionary programming and algorithms in various domains. These workshops were held in conjunction with the 5th European Conference on Genetic Programming EuroGP 2002 in Kinsale, Ireland, in April 2002. The 33 revised full papers presented were carefully reviewed and selected by the respective program committees. In accordance with the three workshops, EvoCOP, EvoIASP, and EvoSTIM, the papers are organized in topical sections on combinatorial optimization problems, image analysis and signal processing, and scheduling, timetabling, and AI planning.
