are the many highly capable autonomous robots that have been promised for novel applications driven by society industry and research not available day despite the tremendous progress in robotics science and systems achieved during the last decades Unfortunately steady improvements in specific robot abilities and robot hardware have not been matched by corresponding robot performance in real world environments This is mainly due to the lack of advancements in robot software that master the development of robotic systems of ever increasing complexity In addition fundamental open problems are still awaiting sound answers while the development of new robotics applications suffers from the lack of widely used tools libraries and algorithms that are redesigned in a modular and performant manner with standardized interfaces Simulation environments are playing a major role not only in reducing development time and cost e.g. by systematic software or hardware in the loop testing of robot performance but also in exploring new types of robots and applications However their use may still be regarded with skepticism Seamless migration of code using robot simulators to real world systems is still a rare circumstance due to the complexity of robot world sensor and actuator modeling These challenges drive the quest for the next generation of methodologies and tools for robot development The objective of the International Conference on Simulation Modeling and Programming for Autonomous Robots SIMPAR is to offer a unique forum for these topics and to bring together researchers from academia and industry to identify and solve the key issues necessary to ease the development of increasingly complex robot software

Advanced NXT Matthias Paul Scholz, 2008-09-08 This amply illustrated book is about building some of Leonardo da Vinci's most famous inventions with LEGO's breathtaking robot technology the LEGO MINDSTORMS NXT In this book you will revive such fascinating devices as the flying machine the aerial screw the revolving bridge the double leaf spring catapult and the armored car five centuries after their creation by the great Renaissance engineer Using some of the most advanced programming environments for the NXT you will make robots that work move and respond the way Leonardo intended his original inventions to do 500 years ago By engineering the LEGO models contained in this book you will not only become acquainted with the MINDSTORMS NXT technology but also with strategies to build advanced robots with NXT and to program them using different state of the art NXT programming languages such as NXT G NXC RobotC pLua and leJOS NXJ For all five robots historical background information is provided Detailed high quality step by step building instructions as well as an elaborate guide for each single program enable both the inexperienced LEGO user as well as the NXT aficionado to become acquainted with the art of producing marvelous NXT creations and make use of many sophisticated features of the NXT This book will unleash the creative powers that slumber in everyone and combine them with the pure joy of playing But beware you might be surprised by the stupendous results this combination is apt to spawn
