## Business Case Study for Interview Example - (Edit & Download)

### Introduction

ABC Logistics, a prominent logistics and supply chain company, faced a significant threat to operational efficiency and customer satisfaction due to outdated technology in warehousing and customer service management. This challenge led to increased fuel-wasting routes to improve efficiency and customer service without disrupting ongoing operations.

### Problem Statement

The core issue was the outdated technology infrastructure at ABC Logistics that constrained the growth of its operations, leading to delays, errors in shipment handling, and a compromise in customer satisfaction. This inefficiency not only affected the company's reputation but also its profitability.

### Analysis

An in-depth analysis was conducted focusing on the existing hardware, technology stack, and customer feedback mechanisms. The findings showed that manual processes and legacy systems were the primary bottlenecks, causing significant delays in response times and poor logistics management. Market research indicated that competitors had moved to more advanced and integrated systems, which provided faster and more reliable service.

### Proposed Solutions

1. **Technology Upgrade:** Implement a suite of the latest enterprise resource planning (ERP) system to streamline logistics operations to streamline all core business processes.
2. **Process Re-engineering:** Overhaul the workflow to eliminate unnecessary steps and integrate automation where possible.
