Marine Biotechnology Anjana K. Vala, Dushyant R. Dudhagara, 2025-08-12 The marine environment has always been beneficial to mankind in one way or another. With advancements in scientific knowledge and technological development, novel aspects of marine resources have been and are being revealed that can be harnessed for sustainable development of blue economy. The book *Marine Biotechnology: A Gateway to Blue Economy* is an attempt to present before the scientific community a compilation of recent developments in the field of marine biotechnology contributed by leading scientists of international repute. The book covers diverse roles of marine biotechnology including in agriculture, probiotics, health sector, novel biomolecules, biochemicals, biomedicine, and pharmaceuticals.

Recent Advancement in White Biotechnology Through Fungi Ajar Nath Yadav, Shashank Mishra, Sangram Singh, Arti Gupta, 2019-03-08 White biotechnology or industrial biotechnology, as it is also known, refers to the use of living cells and/or their enzymes to create industrial products that are more easily degradable, require less energy, create less waste during production, and sometimes perform better than products created using traditional chemical processes. Over the last decade, considerable progress has been made in white biotechnology research, and further major scientific and technological breakthroughs are expected in the future. Fungi are ubiquitous in nature and have been sorted out from different habitats, including extreme environments, high temperature, low temperature, salinity, and pH, and may be associated with plants, epiphytic, endophytic, and rhizospheric. The fungal strains are beneficial as well as harmful for human beings. The beneficial fungal strains may play important roles in the agricultural, industrial, and medical sectors. The fungal strains and their products, enzymes, bioactive compounds, and secondary metabolites are very useful for industry, e.g., the discovery of penicillin from *Penicillium chrysogenum*. This discovery was a milestone in the development of white biotechnology, as the industrial production of penicillin and antibiotics using fungi moved industrial biotechnology into the modern era, transforming it into a global industrial technology. Since then, white biotechnology has steadily developed and now plays a key role in several industrial sectors, providing both high-value nutraceutical and pharmaceutical products. The fungal strains and bioactive compounds also play an important role in environmental cleaning. This volume covers the latest developments and research in white biotechnology with a focus on diversity and enzymes.

Microbial Nanobionics Ram Prasad, 2019-11-30 *Microbial Nanobionics Volume 1: State of the Art* discusses a wide range of microbial systems and their utilization in biogenic synthesis of metallic nanoparticles. The rich biodiversity of microbes makes them excellent candidates for potential nanoparticle synthesis in biofactories. Through a better understanding of the biochemical and molecular mechanisms of the microbial biosynthesis of metal nanoparticles, the rate of synthesis can be better developed, and the monodispersity of the product can be enhanced. The characteristics of nanoparticles can be controlled via optimization of important parameters such as temperature, pH, concentration, and

pressure which regulate microbe growth conditions and cellular and enzymatic activities Large scale microbial synthesis of nanoparticles is a sustainable method due to the non hazardous non toxic and economical nature of these processes The applications of microbial synthesis of nanoparticles are wide and varied spanning the industrial biomedical and environmental fields Biomedical applications include improved and more targeted antimicrobials biosensing imaging and drug delivery In the environmental fields nanoparticles are used for bioremediation of diverse contaminants water treatment catalysis and production of clean energy With the expected growth of microbial nanotechnology this volume will serve as a comprehensive and timely reference

Current Trends in Marine Biology Anjana K. Vala,K. Suresh Kumar,2022-08-26 The oceans and the marine environment covering about 70% of the earth are critically important to humans Marine biology provides an understanding of the various organisms that inhabit this essential ecosystem Recently biologists encompassing a broad interdisciplinary community of researchers and industrialists have gained enormous interest in understanding the enigmas of survival the food web primary production natural products interactions and competition communication reproduction evolution diversity fouling and many other aspects pertaining to the marine ecosystem This book encompasses original and internationally significant contributions from all fields of marine biology that promote understanding of the current marine environment and its life forms It offers insights from a range of scientific sub disciplines and will prove beneficial for students researchers scientists and industrialists It addresses topics such as bioremediation authentication biodiversity as well as commercial utility

Environmental Biotechnology Vol. 2 K. M. Gothandam,Shivendu Ranjan,Nandita Dasgupta,Eric Lichtfouse,2020-05-01 This book provides the technological insight on biorefinery and nanoremediation and provides comprehensive reviews on applications of Biochar for environmental sustainability Critical review on biosurfactants in food applications as well as sustainable agricultural practices has also been provided in this book It also highlights the microbial omics and microRNAs for protecting ecotoxicity Overall this book provides critical as well as comprehensive chapters on wastewater treatment using different technologies

Approaches in Bioremediation Ram Prasad,Elisabet Aranda,2018-12-08 Bioremediation refers to the clean up of pollution in soil groundwater surface water and air using typically microbiological processes It uses naturally occurring bacteria and fungi or plants to degrade transform or detoxify hazardous substances to human health or the environment For bioremediation to be effective microorganisms must enzymatically attack the pollutants and convert them to harmless products As bioremediation can be effective only where environmental conditions permit microbial growth and action its application often involves the management of ecological factors to allow microbial growth and degradation to continue at a faster rate Like other technologies bioremediation has its limitations Some contaminants such as chlorinated organic or high aromatic hydrocarbons are resistant to microbial attack They are degraded either gradually or not at all hence it is not easy to envisage the rates of clean up for bioremediation implementation Bioremediation represents a field of great expansion due to the important development of new technologies

Among them several decades on metagenomics expansion has led to the detection of autochthonous microbiota that plays a key role during transformation Transcriptomic guides us to know the expression of key genes and proteomics allow the characterization of proteins that conduct specific reactions In this book we show specific technologies applied in bioremediation of main interest for research in the field with special attention on fungi which have been poorly studied microorganisms Finally new approaches in the field such as CRISPR CAS9 are also discussed Lastly it introduces management strategies such as bioremediation application for managing affected environment and bioremediation approaches Examples of successful bioremediation applications are illustrated in radionuclide entrapment and retardation soil stabilization and remediation of polycyclic aromatic hydrocarbons phenols plastics or fluorinated compounds Other emerging bioremediation methods include electro bioremediation microbe aided phytoremediation genetic recombinant technologies in enhancing plants in accumulation of inorganic metals and metalloids as well as degradation of organic pollutants protein metabolic engineering to increase bioremediation efficiency including nanotechnology applications are also discussed
