

Barriers to Trade

The harmonization of national export and import regulations, free trade is a system wherein all the goods of governments have the same international trade possibilities for the benefit of their own economies. Once the free trade system has been achieved, many trade barriers, such as tariff regulations, are being torn apart. Examples of these barriers include the General Agreement on Trade and Tariffs, the World Trade Organization (WTO), the Organisation for Economic Co-operation and Development (OECD), and the North Atlantic Trade Agreement (NAFTA) forum.

However, before the harmonization of national export and import regulations has been made, each country might impose its own tariff regulations. As shown in Figure 2, when protection costs increase the domestic price increases, as does the domestic supply and demand. The domestic supply curve shifts from its original position to a new position and the domestic price rises. If there were no international trade, the equilibrium price would be P_1 . If the equilibrium price would be P_2 , the domestic supply curve, S_2 , would be produced only by domestic firms.

Figure 2.12
Domestic Trade

It shows in this domestic trade that total supply harmonization, the production of domestic goods and services, is Q_2 , which is supplied at P_1 and amount Q_1 . They are able to increase their welfare, as well as their price. Also at P_2 , domestic firms are producing Q_4 and foreign producers are producing Q_3 . $Q_4 > Q_2$. Thus, domestic firms are producing less under harmonization. They would prefer to produce less under the harmonization.
