Introduction

There are four market types namely; monopoly, monopolistic competition, pure competition and oligopolistic markets (Peterson 1977). Pure monopolies and pure competition firms represent the two extremes of competition which is not easy to find in practice. The following is a review of an example of an organisation in Maryland operating in a pure competition market and one in a pure monopoly market.

Example of a firm operating in a pure competition market

Pure competitors such as retail operations however have no control of the market and thus no control over prices (O'Sullivan, Sheffrin, and Perez 2009). A firm in such a market could sell any quantities of its products without influencing the market prices.

It is quite difficult to get markets that are purely competitive where buyers have full knowledge, there are no barriers of entry and exit, buyers can easily switch from one seller to the other, and where there are a large number of buyers and sellers. However, retailers of agricultural commodities could provide a good example of a pure competition market.

Some traders have sought to differentiate their farm produce thus reducing price competition in this market. For instance, since consumers are becoming more health conscious, traders of farm produce are venturing into natural foods in place of GMOs whereas packaging is also gaining prominence as a differentiation tool.

Market for agricultural products is set to change resulting to a decline in price competition. Traders are seeking other forms of competitive fronts such as packaging and focus of healthy products. Therefore, the market is set to convert into monopolistic competition where differentiation is critical. Suppliers should therefore brace themselves for non-price competition.

Example of a pure monopoly

A pure monopoly is a market structure in which there is only one seller of a product or service. The monopolist has no close substitutes and no competitors. The monopolist can raise or lower the price without any competition. The monopolist is a price maker.

The monopolist has a high degree of market power. The monopolist can raise or lower the price without any competition. The monopolist is a price maker. The monopolist has a high degree of market power.

Microeconomics Melvin L Greenhut argues that sellers in a space economy have the power to set prices and that this power stems naturally from the geographic separation of markets Focusing on differentiated markets this collection of his acclaimed essays reveals that even the pricing of services electrical power and many other goods although not distance related per se can be analysed from a spatial perspective Professor Greenhut demonstrates and empirically indicates how and why modern firms price heterogeneously over differentiated markets The spatial framework sheds light on the impact of mergers and antitrust legislation as well as on international trade and other issues These essays are intended to revitalize neoclassical microeconomics by adding a spatial dimension and so making purely and monopolistically competitive frameworks irrelevant No other collection of essays points uniquely to the need to reformulate microeconomics on the basis of time and space Spatial Microeconomics and its companion volume Location Economics will be welcomed by students teachers and practitioners of economics for improving access to Professor Greenhut s many important essays and papers
