

## LAB REPORT FORMAT (GRADE 11)

---

Laboratory activities in science are an excellent learning device. Besides providing enjoyable opportunities for group dynamics, and skill development, they also amplify the theory by concrete example. Often, lab activities can illustrate exceptions, enhance problem solving, provide the opportunity for in-depth or lateral thinking or allow for the development of critical analysis and error analysis.

However, the lab report remains as the main form of evaluation of the lab activity. This format is structured to allow you to report your findings in a universal manner. You are challenged to hypothesize, evaluate your results and present your findings in the most appropriate manner possible. Evaluation of your lab report will include both content and your ability to express yourself appropriately in the report form.

Expectations will include your ability to:

- follow the required format
- record, present and manipulate data in the most appropriate manner
- evaluate your results with respect to experimental errors
- comprehend the theoretical principles
- use proper sentence structure, grammar and spelling

Although it is possible that all aspects of this format may not apply in every case, you are to use this format for all lab reports leaving out only those parts which have been specifically deleted by your teacher.

A Word template is provided for you to use on the Moodle as well as a sample lab report to follow.

### **GENERAL RULES**

1. Avoid the use of personal pronouns. Use the third person passive tense.
2. Indent all text away from key headings. OR make the headings stand out.
3. Include a meaningful title and ensure that the title, student's name, teacher's name, date, and course code appear at the top of the first page.

### **INTRODUCTION**

This section states the reason for doing the lab. It should be one sentence beginning with the word "To" and expressed in the future tense.

The "hypothesis" is a statement of what you believe the outcome will be. It should be supported with an explanation. The format of the hypothesis will depend on the nature of the lab. The explanation is based on prior scientific knowledge. It should be either researched, or if the appropriate lessons have been taught in class, this it should be based on those lessons. It may be an explanation of the theory that covers the lab topic.

### **EXPERIMENT**

This section describes the materials you will use and how you will set up the equipment. Your information may include a diagram but should be no more than 1-2 paragraphs describing what was done during the lab.

### **RESULTS & ANALYSIS**

In this section, you will present your findings. Depending on the lab, they may be visual descriptions, numerical data, a chart or a table of values. You must choose the best possible method of presentation for the data you collect. This requires an understanding of the lab procedure and purpose, to know beforehand what you will be looking for and what you might be expected to do with the data.
