Matlab Attaway Third Edition:

Matlab Dorothy C. Attaway, 2013-06-03 MatLab Third Edition is the only book that gives a full introduction to programming in MATLAB combined with an explanation of the software's powerful functions enabling engineers to fully exploit its extensive capabilities in solving engineering problems. The book provides a systematic step by step approach building on concepts throughout the text facilitating easier learning. Sections on common pitfalls and programming guidelines direct students towards best practice. The book is organized into 14 chapters starting with programming concepts such as variables, assignments, input/output and selection statements, moves onto loops and then solves problems using both the programming concept and the power of MATLAB side by side. In depth coverage is given to input/output, a topic that is fundamental to many engineering applications. Vectorized Code has been made into its own chapter in order to emphasize the importance of using MATLAB efficiently. There are also expanded examples on low level file input functions, Graphical User Interfaces and use of MATLAB Version R2012b modified and new end of chapter exercises, improved labeling of plots and improved standards for variable names and documentation. This book will be a valuable resource for engineers learning to program and model in MATLAB as well as for undergraduates in engineering and science taking a course that uses or recommends MATLAB. Presents programming concepts and MATLAB built in functions side by side. Systematic step by step approach building on concepts throughout the book facilitating easier learning. Sections on common pitfalls and programming guidelines direct students towards best practice.

Signals and Systems (Edition 5.0) Michael D.

Adams, 2022-12-31 This book is intended for use in teaching undergraduate courses on continuous time and/or discrete time signals and systems in engineering and related disciplines. It provides a detailed introduction to continuous time and discrete time signals and systems with a focus on both theory and applications. The mathematics underlying signals and systems is presented including topics such as signal properties, elementary signals, system properties, continuous time and discrete time, linear time invariant systems, convolution, continuous time and discrete time Fourier series, the continuous time and discrete time Fourier transforms, frequency spectra and the bilateral and unilateral Laplace and z transforms. Applications of the theory are also explored including filtering, equalization, amplitude modulation, sampling, feedback control systems, circuit analysis, Laplace domain techniques for solving differential equations and z domain techniques for solving difference equations. Other supplemental material is also included such as a detailed introduction to MATLAB, a review of complex analysis, an introduction to partial fraction expansions, an exploration of time domain techniques for solving differential equations and information on online video lecture content for material covered in the book. Throughout the book many worked through examples are provided. Problem sets are also provided for each major topic covered.
