Algebra and Its Applications David C. Lay, Steven R. Lay, Judith McDonald, 2016 With traditional linear algebra texts the course is relatively easy for students during the early stages as material is presented in a familiar concrete setting However when abstract concepts are introduced students often hit a wall Instructors seem to agree that certain concepts such as linear independence spanning subspace vector space and linear transformations are not easily understood and require time to assimilate These concepts are fundamental to the study of linear algebra so students understanding of them is vital to mastering the subject This text makes these concepts more accessible by introducing them early in a familiar concrete setting developing them gradually and returning to them throughout the text so that when they are discussed in the abstract students are readily able to understand **KEY TOPICS** Linear Equations in Linear Algebra Matrix Algebra Determinants Vector Spaces Eigenvalues and Eigenvectors Orthogonality and Least Squares Symmetric Matrices and Quadratic Forms The Geometry of Vector Spaces Optimization Finite State Markov Chains **MARKET** for all readers interested in linear algebra **NOTE** Before purchasing check with your instructor to ensure you select the correct ISBN Several versions of Pearson's MyLab MyMathLab does not come packaged with this content MyMathLab is not a self-paced technology and should only be purchased when required by an instructor If you would like to purchase both the physical text and MyMathLab search for 9780134022697 0134022696 Linear Algebra and Its Applications plus New MyMathLab with Pearson eText Access Card
