Mathematics for Social Justice Catherine A. Buell,Bonnie Shulman,2021-11-17 Mathematics instructors are always looking for ways to engage students in meaningful and authentic tasks that utilize mathematics At the same time it is crucial for a democratic society to have a citizenry who can critically discriminate between fake and reliable news reports involving numeracy and apply numerical literacy to local and global issues This book contains examples of topics linking math and social justice and addresses both

goals There is a broad range of mathematics used including statistical methods modeling calculus and basic algebra The range of social issues is also diverse including racial injustice mass incarceration income inequality and environmental justice There are lesson plans appropriate in many contexts service learning courses quantitative literacy reasoning courses introductory courses and classes for math majors What makes this book unique and timely is that the most previous curricula linking math and social justice have been treated from a humanist perspective This book is written by mathematicians for mathematics students Admittedly it can be intimidating for instructors trained in quantitative methods to venture into the arena of social dilemmas This volume provides encouragement support and a treasure trove of ideas to get you started The chapters in this book were originally published as a special issue of the journal PRIMUS Problems Resources and Issues in Mathematics Undergraduate Studies Subject Guide to Books in Print ,2001 **Simulation-based Optimization of Energy Efficiency in Production** Anna Carina Römer,2021-02-11 The importance of the energy and commodity markets has steadily increased since the first oil crisis The sustained use of energy and other resources has become a basic requirement for a company to competitively perform on the market The modeling analysis and assessment of dynamic production processes is often performed using simulation software While existing approaches mainly focus on the consideration of resource consumption variables based on metrologically collected data on operating states the aim of this work is to depict the energy consumption of production plants through the utilization of a continuous simulation approach in combination with a discrete approach for the modeling of material flows and supporting logistic processes The complex interactions between the material flow and the energy usage in production can thus be simulated closer to reality especially the depiction of energy consumption peaks becomes possible An essential step towards reducing energy consumption in production is the optimization of the energy use of non value adding production phases Linear Algebra with Applications Charles G. Cullen,1997 This clear unintimidating introductory text is distinguished by its strong computational and applied approach Suitable for a sophomore level course in linear matrix or computational algebra it prepares students for further study in mathematics computer science chemistry or economics An outstanding interactive software package specifically developed to accompany this text offers ease of use power and flexibility focusing attention on the interpretation of calculations rather than on the calculations themselves The Second Edition has been improved by including more applications more motivation to discussions more graphics and discussions of various relevant software packages and the TI 85 graphics calculator *Advanced Modern Control System Theory and Design* Stanley M.
