Strong air movements	X			The distance between the unloading bay and the factory is approximately 5 m from the building which will provide some protection. However, the opposite side of the building is open and may pose a risk from strong winds. This risk will be increased when large parts are on the trolley, thus causing a 'kite' effect which can lead to the trolley moving and causing injuries to employees and/or damage to property and/or the parts that are on the trolley. The absence of brakes makes the trolley more susceptible to movement, even in lighter wind conditions.	Client must ensure the parts placed on the trolley are sufficiently strapped to prevent damage caused by high winds. Brakes on the trolley will reduce the risk of it being blown easily. The trolley may be loaded within the factory during strong gusts OR the trolley movement can be delayed due to inclement weather	H&S Client, Client Staff, Safeti
