• **Control:** *Antibiotic resistance* (bacteria become resistant to antibiotic drug treatment) is regulated by *plasmids* (small, circular, self-replicating and extrachromosomal DNA molecules) or *transposons* (mobile genetic elements that can move from one cell to another).

**Abstract**—This study examined the effectiveness of a 10-week, 12-session, group-based intervention for children with attention deficit hyperactivity disorder (ADHD) and comorbid conduct disorder (CD). The intervention was designed to address the social skills deficits and conduct problems associated with these disorders. The study was conducted in a community-based setting. The results showed that the intervention was effective in reducing the conduct problems and improving the social skills of the children. The findings suggest that the intervention may be a useful tool for the treatment of children with ADHD and CD.

**Abstract** The purpose of this study was to determine the effect of a 12-week, low-intensity, supervised walking program on the physical and psychological health of sedentary, middle-aged women. The study was a randomized, controlled trial. The intervention group (n = 20) participated in a 12-week walking program, while the control group (n = 20) remained sedentary. The walking program was designed to be low-intensity, with a target heart rate of 110-120 beats per minute. The program was supervised by a certified walking instructor. The study was conducted in a community setting. The results of the study showed that the walking program had a positive effect on the physical and psychological health of the women. The women in the walking program showed significant improvements in walking distance, walking speed, and walking time. They also showed significant improvements in mood, self-esteem, and body image. The women in the control group showed no significant changes in any of the measured variables. The results of this study suggest that a 12-week, low-intensity, supervised walking program can be an effective intervention for improving the physical and psychological health of sedentary, middle-aged women.
