iterative scale up method with case studies which highly expedites the process innovation through the following key sequences Integrated Life-Cycle and Risk Assessment for Industrial Processes and Products Guido Sonnemann, Michael Tsang, Marta Schuhmacher, 2018-10-10 Life cycle assessment is a methodology used to evaluate the environmental impacts of a product process or service during its life cycle and risk assessment is a tool to evaluate potential hazards to human health and the environment introduced by pollutant emissions The United Nations Sustainable Development Goals call for among other objectives responsible consumption and production by decoupling environmental resource use and environmental impacts from economic growth and human well being Life cycle assessment and risk assessment are both analytical system approaches that allow scientists and other decision makers to address these issues and objectives according to the current understanding of environmental mechanisms This book is the first attempt to illustrate the existing interfaces between life cycle assessment and risk assessment and to indicate options for further integration of both tools The second edition Focuses on sustainability Considers new developments in life cycle assessment and environmental risk assessment over the last ten years at the international level Introduces broader concepts and discussions on integrative versus the complementary use of life cycle and risk assessments Extends the scope of integrated life cycle and risk assessments to critical raw materials Includes more case studies and discusses engineered nanomaterials Featuring contributions from leading experts Integrated Life Cycle and Risk Assessment for Industrial Processes and Products is a great reference for graduate students and professionals in environmental management and intends to catalyze communication between life cycle assessment and risk assessment experts and scientists in academia industry and governmental agencies The practical format of the book illustrated with flowcharts examples exercises and concrete applications makes it a useful manual for analyzing situations and making decisions Tools and Methods for Pollution Prevention Subhas K. Sikdar, Urmila Diwekar, 1999-08-31 Tools are needed to define measure and assess pollution in processes and products to direct and measure improvements in designing cleaner processes and products and to design benign processes and products Life cycle assessment process simulation and integration material substitution and environmental impact assessment are some of these tools Advances have been made recently in incorporating environmental criteria in process and product design some renditions of which are commercially available This is the first compilation of methods tools and models that can be used to design products and manufacturing processes that prevent pollution from occurring in the first place rather than treating the wastes after they are formed There is also a critique of social barriers to pollution prevention Readership Scientists and advisors in academia government and industry engaged in encouraging enforcing developing and or implementing cleaner processes and products

Encyclopedia of Renewable and Sustainable Materials ,2020-01-09 Encyclopedia of Renewable and Sustainable Materials Five Volume Set provides a comprehensive overview covering research and development on all aspects of renewable recyclable and sustainable materials The use of renewable and sustainable materials in building construction the

automotive sector energy textiles and others can create markets for agricultural products and additional revenue streams for farmers as well as significantly reduce carbon dioxide CO₂ emissions manufacturing energy requirements manufacturing costs and waste This book provides researchers students and professionals in materials science and engineering with tactics and information as they face increasingly complex challenges around the development selection and use of construction and manufacturing materials Covers a broad range of topics not available elsewhere in one resource Arranged thematically for ease of navigation Discusses key features on processing use application and the environmental benefits of renewable and sustainable materials Contains a special focus on sustainability that will lead to the reduction of carbon emissions and enhance protection of the natural environment with regard to sustainable materials

Corrosion, Environmental Degradation, and Surface Engineering Harish Hirani, 2025-10-14 Corrosion Environmental Degradation and Surface Engineering Understanding Mitigation and Prevention offers an insightful exploration into the causes mechanisms and mitigation strategies of material degradation This comprehensive work unravels the complexities of corrosion wear and fatigue while showcasing cutting edge techniques like surface engineering and predictive analytics Packed with real world case studies and innovative solutions the book bridges the gap between theoretical concepts and practical applications This book Explores surface degradation mechanisms and commercial perspectives on surface degradation Discusses dimensionless parameters in wear phenomena fracture surface degradation and the influence of heat and radiation on surface degradation Covers environmental assisted surface deterioration and factors affecting the atmospheric corrosion Highlights the importance of digitization and data driven approaches in engineering Assesses the economic losses caused by corrosion degradation and quantifies economic losses attributed to corrosion degradation Ideal for students researchers and industry professionals the book provides the tools and knowledge

necessary to combat surface degradation and promote sustainability across critical sectors **Anaerobic Digestion** Gavin Collins, Eric D. van Hullebusch, Giovanni Esposito, Cynthia Carliell-Marquet, Fernando G. Fermoso, 2018-11-27 Anaerobic digestion AD is a naturally occurring biological process in soils sediments ruminants and several other anoxic environments that cycles carbon and other nutrients and converts organic matter into a methane rich gas As a biotechnology AD is now well established for the treatment of the organic fraction of various waste materials including wastewaters but is also increasingly applied for an expanding range of organic feedstocks suitable for biological conversion to biogas AD applications are classified in various ways including on the basis of bioreactor design and operating parameters such as retention time temperature pH total solids TS and volatile solids VS contents and biodegradability of substrates AD is an attractive bioenergy and waste wastewater treatment technology The advantages of AD for waste treatment include production of a useable fuel biogas methane possibility of high organic loading reduced carbon footprint and suitability for integration into a wide variety of process configurations and scales Specifically two important and developing applications exemplify the potential of AD technologies 1 the integration of AD as the basis of the core technologies underpinning municipal wastewater and sewage treatment to displace less sustainable and more energy intensive aerobic biological treatment systems in urban water infrastructures and 2 technical innovations for higher rate conversions of high solids wastestreams and feedstocks for the production of energy carriers i e methane biogas but possibly also biohydrogen and other industrially relevant intermediates such as organic acids Internationally the research effort to maximize AD biogas yield has increased ten fold over the past decade Depending on the feedstocks bioreactor design and process parameters fundamental and applied knowledge are still required to improve conversion rates and biogas yields This Research Topic covers aspects related to AD processes such as the effect of feedstock composition as well as the effect of feedstock pre treatment bioreactor design and operating modes on process efficiency microbial community dynamics and systems biology influence of macro and micro nutrient concentrations and availability process control upgrading and calibration of anaerobic digestion models e g ADM1 considering the biochemical routes as well as the hydrodynamics in such ecosystems and novel approaches to process monitoring such as the development and application of novel and rapid diagnostic assays including those based on molecular microbiology Detailed full scale application studies were also particularly welcomed **ISO 14000 Guide: The New International Environmental Management Standards** Joseph Cascio, Gayle Woodside, Philip Mitchell, 1996-05 Meet a higher environmental standard with ISO 14000 First ISO 9000 set the international standard for quality Now ISO 14000 sets an equal standard for environmental compliance moving beyond mere legal requirements to demand organizations actively manage every environmental aspect of their operations products and services In ISO 14000 Guide Joseph Cascio a lead developer of ISO 14000 and environmental management experts Gayle Woodside and Phillip Mitchell arm you with an instant primer to ISO 14000's rationale importance and implementation Step by step they show you how to achieve ISO 14000
