Sustainable Manufacturing and Remanufacturing Management Weidong Li, Sheng Wang, 2018-06-29 This book reports on the latest research and applications in the fields of sustainable manufacturing and remanufacturing as well as process planning and optimization technologies. It introduces innovative algorithms, methodologies, industrial case studies, and applications. It focuses on two topics: sustainable manufacturing for machining technologies and remanufacturing of waste electronic equipment. Various methods are covered for each one, including macro process planning, dynamic scheduling, selective disassembly planning, and cloud-based disassembly planning. The experimental analysis provided for every method explains the benefits as well as how they are sustainable for various real-world applications. Further, a theoretical analysis and algorithm design is presented for each, accompanied by the contributors' relevant research, including step-by-step guides, application scenarios, relevant literature surveys, implementation details, and case studies and critical reviews on the relevant technologies. This book is a valuable resource for researchers in sustainable manufacturing, remanufacturing, and product lifecycle management communities, as well as practicing engineers and decision makers in industry and all those interested in sustainable product development. It is also useful reading material for postgraduates and academics wanting to conduct relevant research and a reference resource for manufacturing engineers developing innovative tools and methodologies.

Cloud Manufacturing Weidong Li, Jörn Mehnen, 2013-03-01 Global networks, which are the primary pillars of the modern manufacturing industry and supply chains, can only cope with the new challenges, requirements, and demands when supported by new computing and Internet-based technologies. Cloud Manufacturing Distributed Computing Technologies for Global and Sustainable Manufacturing introduces a new paradigm for scalable service-oriented, sustainable, and globally distributed manufacturing systems. The eleven chapters in this book provide an updated overview of the latest technological development and applications in relevant research areas. Following an introduction to the essential features of Cloud Computing, chapters cover a range of methods and applications, such as the factors that actually affect adoption of the Cloud Computing technology in manufacturing companies and a new geometrical simplification method to stream 3D manufacturing data via the Internet. This is further supported by case studies and real-life data for Waste Electrical and Electronic Equipment (WEEE) remanufacturing. This compilation of up-to-date research and literature can be used as a textbook or reference for mechanical manufacturing and computer engineering graduate students and researchers for efficient utilization, deployment, and development of distributed and Cloud manufacturing systems, services, and applications.
