Motor Industry Magazine ,2005-02 To the Last Man Malcolm Atkin,2019-04-30 This historical study of the UK s WWII homeland defense service dispels the propaganda and pop culture myths to reveal its true wartime role In 1940 Britain formed an armed citizen militia to act as the first line of defense in case of Nazi invasion an essential if suicidal mission intended to buy time for the organization of regular forces Officially they were the Home Guard Later a British sitcom that ran for nearly a decade in the 60s and 70s dubbed them Dad s Army That show contributed to a distorted perception of the Home Guard that persists today But as Malcolm Atkin reveals in this thought provoking book the Home Guard s image was manipulated from its earliest days Sifting through official documents and contemporary histories as well as stories artwork and poetry of the era and comparing these with postwar films and histories Atkin explores how the myths of the Home Guard arose and were exploited He also shows how the strong sense of gallows humor amongst its volunteers which fits in with a long tradition of self deprecating humor in the British army was taken out of context and became the basis of the TV series To the Last Man strips back the myths analyzing how the modern perception has evolved The result is a new gritty and sometimes shocking appreciation of the role that the Home Guard was expected to play in the Second World War

History of the German Night Fighter Force, 1917-1945 Gebhard Aders,1979 Originaludgave Geschichte der deutschen Nachtjagd 1917 1945 **Computational Fluid and Solid Mechanics** K.J. Bathe,2001-05-21 The MIT mission to bring together Industry and Academia and to nurture the next generation in computational mechanics is of great importance to reach the new level of mathematical modeling and numerical solution and to provide an exciting research environment for the next generation in computational mechanics Mathematical modeling and numerical solution is today firmly established in science and engineering Research conducted in almost all branches of scientific investigations and the design of systems in practically all disciplines of engineering can not be pursued effectively without frequently intensive analysis based on numerical computations The world we live in has been classified by the human mind for descriptive and analysis purposes to

consist of fluids and solids continua and molecules and the analyses of fluids and solids at the continuum and molecular scales have traditionally been pursued separately Fundamentally however there are only molecules and particles for any material that interact on the microscopic and macroscopic scales Therefore to unify the analysis of physical systems and to reach a deeper understanding of the behavior of nature in scientific investigations and of the behavior of designs in engineering endeavors a new level of analysis is necessary This new level of mathematical modeling and numerical solution does not merely involve the analysis of a single medium but must encompass the solution of multi physics problems involving fluids solids and their interactions involving multi scale phenomena from the molecular to the macroscopic scales and must include uncertainties in the given data and the solution results Nature does not distinguish between fluids and solids and does not ever repeat itself exactly This new level of analysis must also include in engineering the effective optimization of systems and the modeling and analysis of complete life spans of engineering products from design to fabrication to possibly multiple repairs to end of service
