KNOWLEDGE CHECK 10-1

- Approximately what percentage of people over age 65 live in nursing homes?
Answer:
Only 2.9% of people 65 and over live in nursing homes.
- What percentage of people over 85 years old live in nursing homes?
Answer:
About 11 percent of those over 85 years live in nursing homes.
- Who has the longer life expectancy, women or men?
Answer:
Women. For infants born in 2015, the average total life expectancy for females is 81.3 years. For males, it is only 76 years. This difference is especially noticeable in the ratio of women to men in the 85+-year-old population, in which women greatly outnumber men (U.S. Department of Health and Human Services, 2017).

KNOWLEDGE CHECK 10-2

- What is the difference between a retirement community and a continuing care retirement community (CCRC)?
Answer:
A retirement community is a housing development planned to provide elder-friendly dwellings and environments for independent living and allow older adults to “downsize” into a house that has less than 2,000 square feet in single-level, livable space. A CCRC is also planned and purchased; however, it offers a wider range of living accommodations (e.g., cottages, cluster homes, apartments). A CCRC also offers assisted living, skilled nursing care, rehabilitation, and dementia care on a large campus-like setting, whereas a retirement community does not.

KNOWLEDGE CHECK 10-3

- Name and give the age ranges of the four stages of older adulthood.
Answer:
Young-old: age 65 to 74
Middle-old: age 75 to 84
Oldest-Old: age 85+
Centenarians (You may have included this separately from the oldest-old. Either way is correct.)
NOTE: Frail Elderly: The term “frail elderly” is not a stage. Rather, it is a set of characteristics that can occur at any age. Frailty is more likely in the older age-groups. It describes a heightened state of vulnerability for developing adverse health outcomes, or the point at which the human organism is believed to have its least capacity for survival. You do not need to include this category in your answer to the question.
- Name and briefly describe four theories of aging.
Answer:
 1. **Wear-and-Tear Theory.** The wear-and-tear theory of aging proposes that repeated insults and the accumulation of metabolic wastes eventually cause cells to wear out and cease functioning.
 2. **Genetic Theories.** Genetic theories of aging state that cells have a preprogrammed, finite number of cell divisions. Hence, the time of death is determined at birth. The genetic messages within the various cells of the body specify how many times the cell can reproduce, thus defining the life of that cell.
 3. **Cellular Malfunction.** Cellular malfunction theories hypothesize that a malfunction in the cell causes changes in cellular DNA, leading to problems with cell replication. The cellular malfunction can be the result of a chemical reaction with the DNA (cross-linking theory), an abundance of free radicals that damage cells and impair their ability to function normally (free-radical theory), or a buildup of toxins over time that cause cell death (toxin theory).
