Jagdpanther Vs Sueastern Front:

Jagdpanther vs SU-100 David R. Higgins, 2014-04-22 The culmination of big gun German and Soviet tank destroyer design can be found in their clashes in Hungary in the spring of 1945 As World War II in Europe reached its end armor development and doctrine had experienced several years of massively accelerated change especially within the crucible of the Eastern Front The German Jagdpanther and Soviet SU 100 both turretless tank destroyer designs based on a traditional turret tank chassis were the culminating examples of how the progression of experience resources and time constraints produced vehicles that were well suited for roles of defence and offence respectively The Jagdpanther represented a well balanced solution and an excellent use of limited resources while the SU 100 was a natural progression of the rudimentary but numerous SU 85 As the role of tanks broadened from essentially infantry support to anti tank armor thickness and armament increased to enable AFVs better to survive such encounters Expensive and hard to upgrade with larger armament owing to the constraints imposed by turret ring size and suspension turreted tanks gave way in some contexts to new designs The Soviets and the Germans alike found that more powerful guns could be installed directly into the hull which in turn reduced the vehicle s silhouette and allowed for increased armour protection for the weight A rapid arms race resulted in the East with each side attempting to develop a battlefield edge if only for a limited time For the Germans the 8 8cm armed Jagdpanther was intended for more defensive roles such as ambushing or flank protection at long range where its superior sights and high velocity rounds imparted an advantage Its sloped armor and relatively light weight meant unlike the more massive and less practical Jagdtiger a Tiger II derivative it could also operate in a more mobile capacity Its superior optics offered key firepower advantages but its origins in the overengineered Panther design meant it was susceptible to breakdown and mechanical problems In contrast the closest Soviet equivalent the SU 100 was designed to operate alongside armor and mechanized forces in an offensive capacity where its 100mm main gun would help counter heavier enemy armour when encountered Although its speed and armour protection were comparable the greater numbers fielded late in the war often proved decisive against an adversary increasingly forced to fight despite inadequate logistics and training By this stage of the conflict the Germans were forced to adopt ad hoc battle groups to coordinate their decimated parent formations assets The Soviets in turn possessed operational momentum and were perhaps less concerned with tactical losses in part as immobilized vehicles could be more easily recovered and reintroduced into combat

Soviet Tanks in Manchuria 1945

William E. Hiestand, 2023-03-16 A new illustrated study of the devastating but little known Soviet armored blitzkrieg against the Japanese in the last weeks of World War II and how it influenced Soviet tank doctrine as the Cold War dawned Although long overshadowed in the West by the dropping of the atomic bombs on Hiroshima and Nagasaki the USSR s lightning strike into Manchuria in August 1945 was one of the most successful and unique campaigns of the era Soviet forces led by over 5 500 tanks and self propelled guns attacked across huge distances and deserts marshes and mountains to smash Japan s

million strong Kwantung Army in a matter of days Japanese forces were short of training and equipment but nevertheless fought fiercely inflicting 32 000 casualties on the Soviets Red Army operations were characterized by surprise speed and deep penetrations by tank heavy forces born of the brutal lessons they had learned during years fighting the Wehrmacht Lessons from the campaign directly shaped Soviet Cold War force structure and planning for mechanized operations against the West Illustrated with contemporary artwork and rare photos from one of the best collections of Soviet military photos in the West this fascinating book explains exactly how the last blitzkrieg of World War II was planned fought and won and how it influenced the Red Army's plans for tank warfare against NATO in Europe **Bazooka vs Panzer** Steven J.

Zaloga, 2016-11-17 World War II saw tanks assume a dominant role in warfare capable of tearing through the enemy lines if left unchecked To combat the threat posed by these armoured behemoths the United States developed the M1 Anti Tank Rocket Launcher better known as the Bazooka First employed in combat during 1942 the weapon required a great deal of skill and courage to use effectively By late 1944 it was a mainstay of the US infantry's anti tank capabilities alongside towed weapons anti tank grenades and other longer established measures Focusing on the savage close quarters fighting between Germany's armoured divisions and the US infantry during the Battle of the Bulge Steven Zaloga's absorbing study compares and assesses the strengths and limitations of the cutting edge technology used by both sides Featuring specially commissioned full colour artwork and explosive battle reports this volume casts new light on the evolving nature of infantry versus tank combat in the closing months of World War II Katyusha Jamie Prenatt, 2016-06-16 Although military rockets have been used since the Middle Ages it was not until the Soviet Union pioneered the concept of Multiple Rocket Launchers MRLs in the late 1930s that they emerged as a decisive weapon In the modern era these Soviet Russian Katyushas have served in combat in Afghanistan Chechnya and Georgia Developed to fill the operational need for massed artillery fire support the MRL possesses enormous destructive power and a devastating psychological impact This New Vanguard provides a survey of Soviet and Russian Federation MRLs from the beginning of their development in 1941 to the present It focuses on the history design and specifications of self propelled ground MRL systems but also covers towed static railway and naval mounts It highlights the many variants of the principal systems and includes MRL unit tables of organization and equipment information on MRL munition types and coverage of dedicated MRL resupply vehicles **Foreign Panthers**

Thomas Seignon, Merlin Robinson, 2022-11-24 A study of the little known career of Germany's Panther perhaps the greatest tank of World War II in foreign hands both during and after the war The Panther was arguably the most successful medium tank design of World War II demonstrated by the number of Germany's enemies that used them after and even during the war While some were used by the Western Allies the Russians used the greatest number of captured Panthers against Nazi Germany though they did not find much favour thanks to their mechanical unreliability and difficulty in acquiring spare parts After the war they were mostly passed on to satellite states such as Bulgaria and Romania The French army also used them

in significant numbers after the war with approximately 50 in service from 1946 to 1950 and they were a significant influence on future French tank design Using detailed artwork and contemporary photographs this fascinating book tells the little known story of the Panther tank in foreign hands in World War II and beyond **Encyclopedia of the Second World War**
Elizabeth-Anne Wheal, 1993 Comprehensive record of all the major events weapons battles and personalities of World War II containing sixteen hundred entries
