Minilessons For Early Multiplication And Division:

Minilessons for Early Multiplication and Division Catherine Twomey Fosnot, Harcourt School Publishers, Willem Uittenbogaard, 2007

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05

Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems. Thus it is par excellence a model of rational inquiry. Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades. Indeed the Enlightenment view of the rational human mind that reasons, makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century. Cognitive psychologists discovered that humans' thoughts and actions often deviate from rules imposed by strict normative theories of inference. Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats. Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving a problem. This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education. We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program. In Simon's bounded rationality and its direct descendant ecological rationality, rationality is understood in terms of cognitive success in the world, correspondence rather than in terms of conformity to content-free norms of coherence e.g. transitivity.

Minilessons for Extending Multiplication and Division Willem Uttenbogaard, Catherine Twomey Fosnot, 2008-03

Minilessons for Extending Multiplication and Division is one of two yearlong resource guides in *Contexts for Learning Mathematics: Investigating Multiplication and Division 3-5*. *Minilessons for Extending Multiplication and Division* can be helpful in grades 4-5 as students work with multiplication and division beyond the basic facts. This guide contains 77 minilessons structured as strings of related computation problems. They are likely to generate discussion of certain strategies or big ideas that are landmarks on the landscape of learning for multiplication and division, particularly using numbers with two and three digits. Although the emphasis is on the development of mental arithmetic strategies, this does not mean learners have to solve the problems in their heads; but it is important for them to do

the problems with their heads In other words as you use this guide encourage students to examine the numbers in each problem and think about clever efficient ways to solve it The relationships between the problems in the minilesson will support students as they progress through the string The open array is used throughout to represent student strategies To learn more visit <http://www.contextsforlearning.com>
