

Problem 1.1

1.1 Two solid cylindrical rods AB and BC are welded together at B and loaded as shown. Determine the magnitude of the force P for which the tensile stress in rod AB is twice the magnitude of the compressive stress in rod BC .

$$A_{AB} = \frac{\pi}{4} (50)^2 = 1963.5 \text{ mm}^2$$

$$\sigma_{AB} = \frac{P}{A_{AB}} = \frac{P}{1963.5} = 509.3 \times 10^{-6} P$$

$$A_{BC} = \frac{\pi}{4} (75)^2 = 4417.9 \text{ mm}^2$$

$$\sigma_{BC} = \frac{(2)(120) - P}{A_{AB}} = \frac{240 - P}{4417.9} = 0.0543 - 226.4 \times 10^{-6} P$$

Equating σ_{AB} to $2 \sigma_{BC}$

$$509.3 \times 10^{-6} P = 2(0.0543 - 226.4 \times 10^{-6} P)$$

$$P = 112.9 \text{ kN}$$

Problem 1.2

1.2 In Prob. 1.1, knowing that $P = 160 \text{ kN}$, determine the average normal stress at the midsection of (a) rod AB , (b) rod BC .

Mechanics of Materials Ferdinand Beer, Jr. Johnston, E. Russell, John DeWolf, David Mazurek, 2008-05-08 At McGraw Hill we believe Beer and Johnston's *Mechanics of Materials* is the uncontested leader for the teaching of solid mechanics. Used by thousands of students around the globe since its publication in 1981, *Mechanics of Materials* provides a precise presentation of the subject illustrated with numerous engineering examples that students both understand and relate to theory and application. The tried and true methodology for presenting material gives your student the best opportunity to succeed in this course. From the detailed examples to the homework problems to the carefully developed solutions manual, you and your students can be confident the material is clearly explained and accurately represented. If you want the best book for your students, we feel Beer Johnston's *Mechanics of Materials* 5th edition is your only choice.

Bio-Inspired Materials Ulisses Targino Bezerra, Heber Sivini Ferreira, Normando Perazzo Barbosa, 2019-04-16 Nature has provided opportunities for scientists to observe patterns in biomaterials which can be imitated when designing construction materials. Materials designed with natural elements can be robust and environment friendly at the same time. Advances in our understanding of biology and materials science coupled with the extensive observation of nature have stimulated the search for better accommodation, compression of materials and the higher organization, reduction of mechanical stress in man-made structures. *Bio Inspired Materials* is a collection of topics that explore frontiers in 3 sections of bio-inspired design: i) bionics design, ii) bio-inspired construction, and iii) bio-materials. Chapters in each section address the most recent advances in our knowledge about the desired and expected relationship between humans and nature and its use in bio-inspired buildings. Readers will also be introduced to new concepts relevant to bionics, biomimicry, and biomimetics. Section i presents research concepts based on information gained from the direct observation of nature and its applications for human living. Section ii is devoted to artificial construction of the Earth. This section addresses issues on geopolymers, materials that resemble the structure of soils and natural rocks, procedures that reduce damage caused by earthquakes in natural construction, the development of products from vegetable resins, and construction principles using bamboo. The last section takes a look into the future towards the improvement of human living conditions. *Bio Inspired Materials* offers readers having a background in architecture, civil engineering, and systems biology a new perspective about sustainable building, which is a key part of addressing the environmental concerns of current times.

Mechanics of Materials Ferdinand Pierre Beer, E. Russell Jr Johnston, John T. DeWolf, 2009 Overview This text is designed for the first course in mechanics of materials or strength of materials offered to engineering students in the sophomore or junior year. The main objective is to help develop in the engineering student the ability to analyse a given problem in a simple and logical manner and to apply to its solution a few fundamental and well-understood principles. In this text, the study of the mechanics of materials is based on the understanding of a few basic concepts and on the use of simplified models. This approach makes it possible to develop all the

necessary formulas in a rational and logical manner and to clearly indicate the conditions under which they can be safely applied to the analysis and design of actual engineering structures and machine components Features New and revised problems Hands On Mechanics Helps the professor build in class experiments that demonstrate complicated topics in the text The experiments and instructions are posted on www.handsonmechanics.com McGraw Hill's ARIS Assessment Review and Instruction System A complete online tutorial electronic homework and course management system designed for greater ease of use than any other system available For students ARIS contains self study tools such as animation and interactive quizzes and it enables students to complete and submit their homework online For instructors ARIS provides teaching resources online and allows them to create or edit problems from the question bank import their own contents and grade and report easy to assign homework quizzes and tests ARIS is free for instructors while students can purchase access from the bookstore or the ARIS website See <http://mharis.mhhe.com> for details Scientific and Technical Books and Serials in Print
