Machine Learning for Civil and Environmental Engineers M. Z. Naser, 2023-08-08 Accessible and practical framework for machine learning applications and solutions for civil and environmental engineers This textbook introduces engineers and engineering students to the applications of artificial intelligence AI machine learning ML and machine intelligence MI in relation to civil and environmental engineering projects and problems presenting state of the art methodologies and techniques to develop and implement algorithms in the engineering domain Through real world projects like analysis and design of structural members optimizing concrete mixtures for site applications examining concrete cracking via computer vision evaluating the response of bridges to hazards and predicating water quality and energy expenditure in buildings this textbook offers readers in depth case studies with solved problems that are commonly faced by civil and environmental engineers The approaches presented range from simplified to advanced methods incorporating coding based and coding free techniques Professional engineers and engineering students will find value in the step by step examples that are accompanied by sample databases and codes for readers to practice with Written by a highly qualified professional with significant experience in the field Machine Learning includes valuable information on The current state of machine learning and causality in civil and environmental engineering as viewed through a scientometrics analysis plus a historical perspective Supervised vs unsupervised learning for regression classification and clustering problems Explainable and causal methods for practical engineering problems Database development outlining how an engineer can effectively collect and verify appropriate data to be used in machine intelligence analysis A framework for machine learning adoption and application covering key questions commonly faced by practitioners This textbook is a must have reference for undergraduate graduate students to learn concepts on the use of machine learning for scientists researchers to learn how to integrate machine learning into civil and environmental engineering and for design engineering professionals as a reference guide for undertaking MI design simulation and optimization for infrastructure *Smart Farming, Smarter Solutions* Manojit Chowdhury, Nand Lal Kushwaha, Gourav Dhar Bhowmick, 2025-10-21 Smart Farming Smarter Solutions Revolutionizing Agriculture with Artificial Intelligence presents a comprehensive exploration of how Artificial Intelligence AI technologies are transforming modern agriculture With contributions from experts across the globe the book covers a wide spectrum of smart farming innovations including AI powered crop monitoring precision irrigation robotics drones big data and supply chain optimization This volume designed for researchers practitioners students and policy makers showcases cutting edge developments that promote sustainable and climate resilient agriculture It is an essential reference for understanding the intersection of artificial intelligence and agriculture in building future ready farming systems *Machine Learning in Computer Vision* Nicu Sebe, Ira Cohen, Ashutosh Garg, Thomas S. Huang, 2005-10-04 The goal of this book is to address the use of several important machine learning techniques into computer vision applications An innovative combination of

computer vision and machine learning techniques has the promise of advancing the field of computer vision which contributes to better understanding of complex real world applications The effective usage of machine learning technology in real world computer vision problems requires understanding the domain of application abstraction of a learning problem from a given computer vision task and the selection of appropriate representations for the learnable input and learned internal entities of the system In this book we address all these important aspects from a new perspective that the key element in the current computer revolution is the use of machine learning to capture the variations in visual appearance rather than having the designer of the model accomplish this As a bonus models learned from large datasets are likely to be more robust and more realistic than the brittle all design models
