Macroeconomics 8th Edition Abel:

Macroeconomic Analysis in the Classical Tradition James C W Ahiakpor, 2021-03-23 Macroeconomic Analysis in the Classical Tradition explains how the influence of Keynes's macroeconomics including his changed definitions of some key macroeconomic concepts has impeded many analysts' ability to readily resolve disputes in modern macroeconomics. Expanding on his earlier work *Macroeconomics without the Errors of Keynes* 2019, the author delves into more aspects of macroeconomic theory and argues for a revision of Keynes's contribution to the field. Attention is given to theories and concepts such as Say's Law, the quantity theory of money, the liquidity trap, the permanent income hypothesis, 100% money, and the Phillips curve analysis. The chapters work to build a careful critique of Keynes's economics and make the case that the classical macroeconomics of Smith, Say, Ricardo, Mill, and others could help resolve present-day policy disagreements and redefine macroeconomic priorities. This book provides essential reading for advanced students and scholars with an interest in the foundations of Keynes's theories and current debates within macroeconomic policy.

Econometrics - Recent Advances and Applications, 2023-10-25 Econometrics uses statistical methods and real-world data to predict and establish specific trends. This analytical method sustains limitless potential, but the necessary research for professionals to understand and implement this is often lacking. *Econometrics: Recent Advances and Applications* explores the theoretical and practical aspects of detailed econometric theories and applications within economics, policymaking, and finance. This book covers various topics such as dynamic stochastic general equilibrium (DSGE) models, machine learning, spatial econometrics, and time series analysis. This book is a useful resource for economists, policymakers, financial analysts, researchers, academicians, and graduate students seeking research on the various applications of econometrics.

The Effects of Government Stock on Investment Activity in BRICS Countries Maggie Kgomo, Thobeka Ncanywa, 2019-12-15 Brazil, Russia, India, China, and South Africa (BRICS) are distinguished as having the fast-growing markets in the universe compared to other markets of emerging economies according to their promising economic prospective and demographic power. This study investigated the effects of government stock on investment activity in BRICS countries. This study used panel autoregressive distributed lag model (PARDL), Engel-Granger causality test, impulse response functions (IRF), and variance decomposition tests. Such techniques were applied to the annual data for the periods 2001 to 2016 in order to determine the effects of government stock on investment activity. The PARDL showed that in the long run, investment activity was positively influenced by government stock on mutual banks and government stock on liquid assets and negatively related to government stock on bonds and government stock on corporations. The Engel-Granger causality test revealed the existence of unidirectional movement between investment activity and government stock on corporations as well as from government stock on bonds to liquid assets. The impulse response functions showed the impulse percentage of fluctuation that the variables did contribute to each other from various periods both in the short and long run. While the variance decomposition of investment indicated that investment was mainly shocked

by its own innovations throughout all the periods A critical evaluation is needed to avoid investment shocks instability of investment activity instability of financial markets and the economy as a whole
