Hummingbirds may be the smallest birds in the world but they have the biggest appetites Their wings flutter on average fifty to eighty times each second as they visit hundreds of flowers over the course of a day to sip the sweet nectar that sustains them Their hearts beat nearly twelve hundred times a minute and their rapid breathing allows these amazing birds to sustain their unique manner of flight They can hover in the air for prolonged periods fly backwards using forceful wings that swivel at the shoulder and dive at nearly two hundred miles per hour Native only to the Americas some hummingbirds have been known to migrate from Mexico to Alaska in the course of a season Watching a hummingbird at a backyard feeder we only see its glittering iridescent plumage and its long narrow beak its rapidly moving wings are a blur to our eyes These tiny colorful birds have long fascinated birders amateur naturalists and gardeners But do they really hum In *Do Hummingbirds Hum* George C West who has studied and banded over 13 500 hummingbirds in Arizona and Carol A Butler provide an overview of hummingbird biology for the general reader and more detailed discussions of their morphology and behavior for those who want to fly beyond the basics Enriched with beautiful and rare photography including a section in vivid color this engaging question and answer guide offers readers a wide range of information about these glorious pollinators as well as tips for attracting photographing and observing hummingbirds in the wild or in captivity **Handbook of Nature-study** Anna
