- Consult a qualified electrician:

 - When using a single-pole switch at the remote location for new construction or to replace a dimmer switch, a lighted switch, or a three-way switch without screw terminals.

Finalizing Installation

1. Make sure the twist-on wire connectors (provided) are secure, then tuck the wires into the timer wall box, leaving room for the timer.
2. Using the provided screws, secure the timer to the wall box.
3. Cover the timer with the wall plate and secure using the provided screws.
4. For three-way wiring, install the remote switch in a wall box. Cover the switch with the wall plate and secure.
5. Reconnect the power at the circuit breaker(s) or disconnect switch(es).

TESTING THE TIMER

1. Make sure the timer displays MMH mode during testing.
2. For three-way wiring, test the remote switch in each of its two positions by pressing ON/OFF several times. The timer should "click" and the controlled light or device load(s) should turn ON or OFF.
3. For three-way wiring, if the timer clicks, but the load does not operate:
 - a. Disconnect the power at the circuit breaker(s) or disconnect switch(es).
 - b. Re-check your wiring and make sure the load is functional.
 - c. Reconnect power at the circuit breaker(s) or disconnect switch(es).
 - d. Retest.
4. For three-way wiring, if the timer clicks, but the load only operates when the remote switch is in one of its two positions, repeat Step 3, a-d, paying close attention to the wiring that connects with the red and blue wires of the timer.

Note: Consult a qualified electrician if the switch and timer fail to operate as intended.

When the controlled device turns ON and OFF as appropriate, congratulations, the timer is successfully installed and ready for programming!

NOTES

Read these notes before continuing with the timer programming process.

- Your timer contains a built-in, non-replaceable, rechargeable battery to maintain the date and time of day information for at least 4 consecutive days of AC power interruption. All other user settings are maintained indefinitely without AC power. The built-in battery will fully charge within a day of connection to AC power. After an extended power outage, if the display is flashing "12:00 AM", you will need to re-enter the calendar, time, and day information.
- The CAL and CLK settings must be programmed before ON or OFF events can be set.
- Each ON or OFF setting is an event. Each event must be programmed separately.
- All multiple loop repeat options when you get to the end of the menu.
- When advancing to the next setting, the timer automatically saves the data from the previous screen regardless of setting changes. All settings save automatically after five minutes.
