Making Connections Lab: Part 1: Impact of exercise on pulse rate

Introduction

What is a pulse rate?

Your pulse rate is also called heart rate. This is the number of times your heart beats in a minute (BPM/Beats Per Minute). Your pulse is the result of blood vessels widening to allow more blood flow through as your heart pumps blood to the rest of your body. It is important to pump blood from the heart to the rest of the body because the blood pumped away from the heart by the arteries is carrying and replenishing oxygenated blood. The veins that carry blood back to the heart are picking up blood rich in CO₂. We use arteries to find pulse rates because; when you feel your pulse you can feel the expansion and contractions of arteries when they are close to the surface of our skin.

You can check your pulse the first thing in the morning, just after you wake up but before you get out of bed. This is called a resting pulse, because you should be the most relaxed and you haven't been moving so your pulse will be lowest at that time. Some people like to check their pulse before and after they exercise. It will be faster when you exercise, have a fever, or are under stress. It will be slower when you are resting.

Checking your pulse on the wrist

You can easily check your pulse on the inside of your wrist, below your thumb.

- Gently place 2 fingers of your other hand on this artery.
- Do not use your thumb, because it has its own pulse that you may feel.
