Karris,2006 This text is an introduction to Simulink a companion application to MATLAB It is written for students at the undergraduate and graduate programs as well as for the working professional Although some previous knowledge of MATLAB would be helpful it is not absolutely necessary Appendix A of this text is an Introduction to MATLAB to enable the reader to begin learning both MATLAB and Simulink to perform graphical computations and programming Chapters 2 through 18 describe the blocks of all Simulink libraries Their application is illustrated with practical examples through Simulink models some of which are supplemented with MATLAB functions commands and statements Chapters 1 and 19 contain several Simulink models to illustrate various applied math and engineering applications Appendix B is an introduction to difference equations as they apply to discrete time systems and Appendix C introduces the reader to random generation procedures This text supplements our Numerical Analysis with MATLAB and Spreadsheet Applications ISBN 0 9709511 1 6 It is self contained the blocks of each library are described in an orderly fashion that is consistent with Simulink s documentation This arrangement provides insight into how a model is used and how its parts interact with each another Like MATLAB Simulink can be used with both linear and nonlinear systems which can be modeled in continuous time sample time or a hybrid of these Examples are provided in this text Most of the examples presented in this book can be implemented with the Student Versions of MATLAB and Simulink A few may require the full versions of these outstanding packages and can be skipped Some add ons known as Toolboxes and Blocksets can be obtained from The MathWorks Inc 3 Apple Hill Drive Natick MA 01760 2098 USA www.mathworks.com *Parallel Processing in Digital Control* D. Fabian Garcia Nocetti,Peter J. Fleming,2012-12-06 *Parallel Processing in Digital Control* is a volume to be published in the new Advances in Industrial Control series edited by Professor M J Grimble and Dr M A Johnson of the Industrial Control Unit University of Strathclyde The growing complexity of digital control systems in such areas as robotics flight control and engine control has created a demand for faster and more reliable systems This book examines how parallel processing can satisfy these requirements Following a survey of parallel computer architectures MIMD Multiple Instruction Multiple Data machines are identified as suitable systems for digital control problems which are characterised by a mixture

of regular and irregular algorithmic tasks An example of a typical MIMD architecture suitable for real time control the Inmos Transputer is introduced together with its associated parallel programming language Occam The key problem in implementing parallel software is associated with mapping parallel tasks onto physical processors In this book a variety of schemes are described and assessed to help illustrate potential areas of difficulty for the real time control software engineer Solutions are proposed and tested on a flight control case study example Recognising the widespread acceptance of MATLAB and its derivatives for computer aided control system design this book demonstrates how mapping strategies can be realised in this environment and integrated with a transputer development system for on line performance evaluation A case study example demonstrates the power of this approach and important issues are highlighted Readers will experience the advantages of parallel processing in digital control while being made aware of the key factors to be considered in the development of an effective solution Practising control engineers and graduate post graduate students will find the book of particular interest and benefit
