Rameshbabu,Dr. S. Prabhakar rao,J. Sunilkumar,Sahebgoud karaddi,2022-08-04 An introductory course on analog and digital communications is fundamental to the undergraduate program in electrical engineering This course is usually offered at the junior level Typically it is assumed that the student has a background in calculus electronics signals and systems and possibly probability theory Bearing in mind the introductory nature of this course a textbook recommended for the course must be easy to read accurate and contain an abundance of insightful examples problems and computer experiments These objectives of the book are needed to expedite learning the fundamentals of communication systems at an introductory level and in an effective manner This book has been written with all of these objectives in mind Given the mathematical nature of communication theory it is rather easy for the reader to lose sight of the practical side of communication systems Throughout the book we have made a special effort not to fall into this trap We have done this by moving through the treatment of the subject in an orderly manner always trying to keep the mathematical treatment at an easy to grasp level and also pointing out practical relevance of the theory wherever it is appropriate to do so

Communication Systems Modeling and Simulation using MATLAB and Simulink K. C. Raveendranathan,2011-09-07 This is probably the first book that employs the technique of simulation experiments as a means of reinforcing the basic concepts of communication theory Undergraduate students are generally exposed to a

mathematically rigorous treatment of communications theory but seldom have the benefit of a practical orientated approach employing modelling and simulation for a thorough assimilation of the subject This book can supplement any standard textbook to cover this significant lacuna in the existing learning methodology It uses MATLAB the language of the technical computing fraternity for the purpose The introductory chapters provide an overview of computer simulation and MATLAB programming concepts Thereafter communications concepts are presented in the traditional manner but followed up with appropriate simulations in MATLAB Simulink Relevant MATLAB source code is given whenever it is used to illustrate a point All the source code given in the text has been tested on MATLAB kernel version 7 10 Release R2010a and is provided in the accompanying CD

Contemporary Communication Systems Using MATLAB and Simulink John G. Proakis, Masoud Salehi, Gerhard Bauch, 2004 Featuring a variety of applications that motivate students this book serves as a companion or supplement to any of the comprehensive textbooks in communication systems The book provides a variety of exercises that may be solved on the computer using MATLAB The authors assume that the student is familiar with the fundamentals of MATLAB By design the treatment of the various topics is brief The authors provide the motivation and a short introduction to each topic establish the necessary notation and then illustrate the basic concepts by means of an example *A Baseband Mixed-signal Receiver Front-end for 1Gbps Wireless Communications at 60GHz* David Amory Sobel, 2008
