flight control and engine control has created a demand for faster and more reliable systems This book examines how parallel processing can satisfy these requirements Following a survey of parallel computer architectures MIMD Multiple Instruction Multiple Data machines are identified as suitable systems for digital control problems which are characterised by a mixture of regular and irregular algorithmic tasks An example of a typical MIMD architecture suitable for real time control the Inmos Transputer is introduced together with its associated parallel programming language Occam The key problem in implementing parallel software is associated with mapping parallel tasks onto physical processors In this book a variety of schemes are described and assessed to help illustrate potential areas of difficulty for the real time control software engineer Solutions are proposed and tested on a flight control case study example Recognising the widespread acceptance of MATLAB and its derivatives for computer aided control system design this book demonstrates how mapping strategies can be realised in this environment and integrated with a transputer development system for on line performance evaluation A case study example demonstrates the power of this approach and important issues are highlighted Readers will experience the advantages of parallel processing in digital control while being made aware of the key factors to be considered in the development of an effective solution Practising control engineers and graduate post graduate students will find the book of particular interest and benefit *Communications Toolbox* ,2002 **MATLAB** ,2004
