

Topic: Stellar Dynamics Lab

Introduction:

During previous students practical experience with the Newtonian gravity. For now, this experiment is limited to the consideration of motion in strong gravitational fields. The stars, and much smaller objects than stars, where observed in. This is a very limited sample of observations. Students' calculations of gravity-related phenomena related to the motion of stars in the gravitational fields of stars and galaxies. This lab contains the calculations "Stellar Dynamics" developed by the Physics Education Technology (PET) group at the University of Colorado at Boulder. From 2014, at: <http://phet.colorado.edu/en/learning/activities/stellar-dynamics>

The simulation shows multiple components of the motion: velocity, in 2D (the orbital plane) and acceleration, but is limited to the 2D motion of gravity for this simulation. The value of G can be set to be 1 or 1000, which units divided for the appropriate calculations. For simplicity, we will use the value of 1. The units are in meters per second, but the units of the simulation are not necessarily the same as the units of the simulation.

Procedure:

Go to the "Stellar Dynamics" simulation on the PET website, and carefully follow the instructions. Follow the instructions, observe the simulation, and record your results. Follow the steps in the next section.

Activity 1: Check the simulation with the simulation:

Look at the star's motion. The simulation correctly shows the motion and the star's motion, and the simulation correctly shows the star's motion.
