

Part II Ligation, Transformation, and Cloning

The bulk of this is will include a Zero Blunt TOPO cloning kit. The material here is quite advanced, but the instructor should refer to the manual available on the Invitrogen website if he or she wishes to incorporate it into lectures.

Based on analysis of general biology lab manuals, ligation, transformation, and cloning steps are well described and explained. Since the time required to finish these steps is relatively long, this manual sticks to the protocols only and leaves it to the instructor to supplement activities found at the end of the manual.

Ligation Protocol

1. Depending on you experiment, dilute PCR product 1:5 by adding 5uL of PCR product to 20uL of H₂O. Use your judgment on whether this is necessary or not.
2. Make master mix.
3. Aliquot 2uL of master mix to each reaction tube add 1uL of diluted PCR product. Mix the reaction by pipetting up and down and incubate for 5 minutes at room temperature.
4. Place the reactions on ice.

Babauta,2015-09-09 This book serves as a manual of research techniques for electrochemically active biofilm research Using examples from real biofilm research to illustrate the techniques used for electrochemically active biofilms this book is of most use to researchers and educators studying microbial fuel cell and bioelectrochemical systems The book emphasizes the theoretical principles of bioelectrochemistry experimental procedures and tools useful in quantifying electron transfer processes in biofilms and mathematical modeling of electron transfer in biofilms It is divided into three sections Biofilms Microbiology and microbioelectrochemistry Focuses on the microbiologic aspect of electrochemically active biofilms and details the key points of biofilm preparation and electrochemical measurement Electrochemical techniques to study electron transfer processes Focuses on electrochemical characterization and data interpretation highlighting key factors in the experimental procedures that affect reproducibility Applications Focuses on applications of electrochemically active biofilms and development of custom tools to study electrochemically active biofilms Chapters detail how to build the reactors for applications and measure parameters The Baculovirus Expression System Linda King,2012-12-06 The decision to write a book about the practical aspects of the

baculovirus expression system stems from the numerous phone calls for help we have had and from the many visitors to our laboratories requiring assistance to find the elusive polyhedrin negative virus containing their favourite gene. We have also organized two expression system workshops and from the manuals we wrote for these it seemed a logical progression to extend them into book form. We appreciate that those who are old hands at the baculovirus expression system may have differing views on some of our procedures but the methods in this book are presented in the light of our own experiences in the laboratory and from our practical workshops and we hope that the book will be especially useful to those new to the system. The first three chapters give the background information to the baculovirus expression system and includes advice on how to choose the right transfer vector and discusses the various methods that are available to select recombinant viruses. The practical chapters concentrate on those aspects which are novel to the baculovirus system: insect cell culture, virus amplification and titration etc and in general leave the standard molecular biological techniques to the other excellent laboratory manuals that are available. However for completeness sake and to avoid constant reference to other manuals we have included brief details of some standard techniques where they are integral to the success of the baculovirus protocols.

Differential Display, 2000-05-04 One of the most challenging tasks facing the modern biological research laboratory is to make sense of the enormous amount of data being generated by various genome projects currently underway and especially the human genome project. Understanding the ways in which genes are differentially expressed in various tissues and cell types throughout ontogenetic development and in pathological processes will go a long way towards understanding the function of all these new genes and their protein products. Differential Display explains in detail how to perform the technique of RT-PCR. Differential Display in various kinds of experimental biological systems. It also examines this technique in the context of other methods of studying differential gene expression such as subtractive hybridisation and the use of high density gene microarrays combined with hybridisation techniques and automatic image analysis.
