Coordinating the Internet Fredrik Lindeberg, 2019-12-10. Många samlade svar på frågor om digitala samhället beror av Internet för att fungera. Allt från smarta datorer till självskanningsapparaterna på ICA till nyare bilar, moderna tillverkningsrobotar, telefoner och affärssystem. Den här licentiatavhandlingen reder ut vad Internet är, hur det styrs, och vad det har för praktiska konsekvenser. Tidigare forskning finns bland annat inom telekommunikation där Internet liknas vid andra telekommunikationstjänster som kabel TV eller mobiltelefoni, och inom digitalisering både inom management och informationssystem där Internet i det närmaste tas för givet som teknisk infrastruktur. Här tar jag en ansats där jag förklarar Internet ur ett kombinerat tekniskt och organisatoriskt perspektiv. Studien är principiellt uppdelad i tre delar. Den första delen fokuserar på att begreppsmässigt hitta ett sätt att diskutera Internet utan att essentiella aspekter faller bort, såsom styrningen eller konsekvenser av den tekniska designen. Jag landar i att Internet är både ett tekniskt och ett organisatoriskt fenomen. Tekniskt i bemärkelsen att det handlar om digital, paketbaserad kommunikation, dvs att olika paket kan ta olika vägar och att det inte finns ett beroende på en viss specifik väg eller krets, vilket kan särskiljas från exempelvis kretskopplad kommunikation, dvs en specifik väg från sändare till mottagare, eller rent analog kommunikation. I denna tekniska dimension är Internet förhållandevis likt klassisk telekommunikation såsom kabel TV och mobiltelefoni och förlitar sig på best-effort paketbaserad kommunikation. I den andra dimensionen, styrning och organisation, är Internet ett explicit bottom-up fenomen som styrs med andra principer och ideal än klassisk telekommunikation. Till sin utformning är denna minsta möjliga koordination som krävs för att möjliggöra koordinering av de tekniska, unika identifierare som behövs för att Internet ska fungera, dvs idag DNS och BGP, förorna av protokoll för användning av namn och nummer på Internet. Både dimensionerna de organisatoriska och tekniska följer samma designprinciper och generellt är det meningsfullt att se Internet som en ekologi av aktörer snarare än en

organisation i strikt teoretiska termer exempelvis finns ingen tydlig vergripande strategi organisationsnummer eller l neutbetalare Det r dessa designprinciper som ligger v l i linje med systemarkitektursprinciper f r datorsystem som r orsaken till Internets lager design d r man generellt inte ska bry som om vad som h nder p andra lager n sitt eget beskrivet som separation of concerns eller i dubbel negation high cohesion i texten samt att ha en minimalistisk ansatts till koordinering och enbart koordinera eller skapa beroenden mellan enheter b de tekniskt och organisatoriskt n r det verkligen beh vs beskrivet som minimum coordination eller low coupling i texten Den andra delen fokuserar p hur Internet kan socialt p verkas eller f r ndras till n got annat eller till n got med en annan funktion sett som en styrd organisation Jag anv nder begreppet social robusthet som motpol till teknisk robusthet som i hur man tekniskt kan f rst ra Internet f r att diskutera dessa aspekter Slutsatserna h r mynnar ut i att Internets explicita bottom up och problemsuppdelnings design g r det m rkbart sv rt f r n gon att medvetet p verka Internet f r att ndra dess beskaffenhet och dessutom visar jag att ven om man praktiskt lyckas ta ver de formellt beslutande r den exempelvis ICANNs och IETFs styrelser s finns det inga formella eller praktiska hinder f r att bara ignorera dem dvs switching costs f r just ICANN eller IETF r l ga om n tekniskt omst ndligt med att konfigurera om r tter och routing tabeller och betydligt enklare n att g fr n IPv4 till IPv6 d utrustning kan beh va ers ttas och d rmed en betydligt h gre switching cost Med andra ord det r enklare att byta ut Internets koordinerare n att byta ut Internet mot n got som fungerar annorlunda D remot r den r dande politiska v rldsordningen ett hot mot Internet eftersom den regelstyrda och koordinerade v rldsordningen inte l ngre r lika sj lvklar som den varit tidigare Den tredje och sista studien fokuserar p n tneutralitet dvs r tten n tverksoperat rer har att f nga v rde i andra dimensioner n trafikm ngd som en praktiskt effekt av hur Internet styrs och fungerar Det prim ra praktiska bidraget r att n tneutralitet inte f r ses som enbart en reglerings och lagstiftningfr ga utan det r mer relevant att prata om i termer av n tneutralitet i praktiken I den bem rkelsen r lagstiftningens vara eller inte vara mindre intressant n praktisk n tneutralitets vara eller inte vara och en tyngdpunktsf rskjutning i den offentliga debatten hade f rt diskussionen n rmare hur Internet fungerar Sammanfattningsvis ger Internets designprinciper att marknadskrafter och ej direkt reglering ska m jligg ra n tneutralitet F r att f rtydliga tanken r att det ska finnas konkurrens inom de flesta niv er eller lager och att det r av vikt att det finns konkurrens rakt igenom s att en kundvilja f r paketneutralitet p tj nsteniv ven p verkar n t gar och infrastrukturniv s att det r anv ndarnas efterfr gan som leder till n tneutralitet om den anv ndarviljan finns Dock kan det mycket v l vara s att man som anv ndare inte r intresserad av n tneutralitet och d ska tj nsteleverant rer n t gare och infrastrukturoperat rer inte heller tvingas vara neutrala genom lagstiftning d det g r stick i st v med designprinciperna Inte heller ska en grupps vilja kring n tneutralitet p verka andras m jligheter att v lja Genomg ende identifierar jag tv kolliderande v rldsbilder den distribuerade regelstyrda och koordinerade ordningen i sitt perspektiv med sina f rk mpar och den mer integrerande och suver na v rldsordningen med sitt perspektiv och sina f rk mpar Rent praktiskt uppfyller Internet en nskad funktion i den tidigare men ej i den senare d Internet designm

ssigt r byggt f r att till ta snarare n kontrollera och best mma Exempelvis finns det inte inbyggda tekniska mekanismer i Internet f r att till exempel m jligg ra statlig vervakning eller kontroll av material som finns tillg ngligt och d ligger det mer i statens intresse att ha kontrollerade telekommunikationstj nster s som kabel TV mobiltelefoni och liknande l sningar d r man inte helt enkelt kan l gga p ett extra lager f r att uppn kryptering anonymitet eller tillg ng till andra tj nster I texten anv nder jag perspektiven tillsammans med teknologi marknader och byr krati f r att f nga upp dynamiken och str mningarna i Internet ekologin och j mf r med tekniska samh llsf r ndringar som exempelvis j rnv gsn t postverk och finansiella marknader Jag konstaterar att Internet har varit styrt av teknologiskt baserade v rderingar till skillnad fr n de andra exemplen som i huvudsak har utformats av dynamiken mellan byr krati och marknad I denna m n f rel r jag att teknologi kan anv ndas som str mning och motperspektiv till den klassiska uppst llningen med byr krati och marknad f r att beskriva fenomen i digitaliseringens tids lder Avhandlingen s tter ven p g ende trender i ett bredare perspektiv mot b de organisation och teknik och trycker p vikten av att f rst delarna var f r sig och tillsammans f r att p ett rikare s tt m la upp helheten The modern society is to a large extent Internet dependent Today we rely on the Internet to handle communication for smart doors self scanning convenience stores connected cars production robots telephones and ERP systems The purpose of this thesis is to unbundle the Internet its technology its coordination and practical and theoretical consequences Earlier research has in telecommunications focused on the Internet as one of many potential telecommunications services such as cellphones or cable TV and the management and information systems field has by and large treated the Internet as black boxable infrastructure This thesis explains the Internet from the combined perspectives of technology and coordination This text contains three empirical studies The first is focused on conceptualizing and discussing the Internet in a meaningful way using both technology and coordination frameworks I unceremoniously conclude that the Internet is both a technological and a coordination phenomenon and neither of these aspects can be ignored The Internet is technological in that it concerns digital packet switched digital communication as opposed to circuit switched or purely analog communications The technological dimension of the Internet is similar in its constituency to classical telecommunications networks and has best effort mechanisms for packet delivery In the other dimension coordination the Internet is an explicit bottom up phenomenon minimally coordinated or governed by other ideals than classical telecommunications networks and systems At its core this least necessary coordination concerns technical unique identifiers necessary for inter network communication in practice today manifested as naming with the DNS protocol suite and numbering with the BGP protocol suite Both dimensions follow similar design characteristics the design of the technical Internet is similar to the design of the coordination of the Internet These design principles which are well aligned with software design principles is the cause of the Internet s layered design separation of concerns in practice and minimal view of coordination the least coordinated Internet In general terms it is fruitful to view the Internet and involved actors as an ecology rather than one organization or entity in need of governance or

control The second study looks at the social resilience of the Internet That is it is possible through social means to change what the Internet is or can be viewed as I use social resilience as a counterpart to technical resilience i e resilience to technical interference In essence the bottom up and separations of concerns design of the coordination aspect of the Internet minimizes possible influence of actors intent on mission disruption I also practically show that even a take over of the central councils have little effect the constituency of the Internet since these councils are not invested with formal powers of enforcement This thesis suggests that the cost of switching from ICANN and IETF to another set of organizations is quite low due to the nature of the coordination of the Internet compared to for example switching all equipment to IPv6 capable equipment However the current political situation is a threat to the current Internet regime since an international and rule based world order is no longer on all states agendas The final empirical study focus on the practical and theoretical implications of the Internet on the case of net neutrality The primary contribution is that de facto and de jure net neutrality differ in practice and as such de facto net neutrality deserves more attention Also I suggest that any regulation either for or against net neutrality is problematic since such regulation would interfere with the inherent coordination mechanisms of the Internet As such regulation should focus on providing the necessary markets for Internet function given the coordination and design of the Internet As a net neutrality example net neutral Internet access options should exist as part of a natural service offering if wanted by customers not due to direct regulation Throughout the thesis I identify two colliding world orders both in terms of digital communication networks and terms of organizing society in general the rule based and coordinating order with its champions and the integrated or sovereign order with its champions In practical terms the Internet can be considered a want in the former the distributed perspective but not the later the integrative perspective since the Internet lacks inherent technical controls for surveillance and content control which are necessary in a world order where borders are important Regardless of if that importance stems from state oversight or intellectual property rights legislation I use these perspectives together with technology markets and bureaucracy to catch the dynamics of the Internet ecology I then compare these dynamics with other technological and societal phenomena such as railway networks postal services and financial markets And conclude that the Internet as conceptualized in this thesis can best be explained by technological values in opposite to the other examples which can best be explained by the dynamics of markets and bureaucracies without any real influence of the values of technology As such I suggest that the classical frame of markets and bureaucracy can fruitfully be expanded with technology to better explain the Internet and similar digitization phenomena This thesis puts current trends in a broader perspective based on technology and organization where the two perspectives together better can draw the full picture in a rich fashion
