where a is a positive constant. The mean value of T is 200.

(i) Write down the value of a . [1]

(ii) Find the probability that an electrical component of this type develops a fault in less than 150 days. [2]

A piece of equipment contains n of these components, which develop faults independently of each other. The probability that, after 150 days, at least one of the n components has not developed a fault is greater than 0.99.

(iii) Find the smallest possible value of n . [4]
