State Board of Vocational and Technical Education,1974 Engine Cooling System Design for Heavy Duty Trucks by Frank G. Rising Frank G. Rising,1977 *The Engine Cooling System* ,1974 The purpose of the automotive engine cooling system is to control metal temperatures within safe limits by removing excess heat produced by the engine High speed driving with today s engines can

produce enough heat energy which is rejected to the cooling system to melt an average 200 lb 90.9 kg engine block in 20 min. Even driving at moderate speeds the temperatures inside the engine are extremely high. Combustion gas temperatures may be as high as 4500 F 2482 C. The heads of the exhaust valves may be red hot and the temperature of lubricated parts such as pistons may run 200 F 93 C or more above the boiling point of water. When metal temperatures are not controlled by adequate cooling the consequences are lubrication failure and serious engine damage.
