A Practical Guide to Security Assessments Sudhanshu Kairab, 2004-09-29. The modern dependence upon information technology and the corresponding information security regulations and requirements force companies to evaluate the security of their core business processes, mission critical data, and supporting IT environment. Combine this with a slowdown in IT spending resulting in justifications of every purchase, and security professionals are forced to scramble to find comprehensive and effective ways to assess their environment in order to discover and prioritize vulnerabilities and to develop cost effective solutions that show benefit to the business. A Practical Guide to Security Assessments is a process focused approach that presents a structured methodology for conducting assessments. The key element of the methodology is an understanding of business goals and processes and how security measures are aligned with business risks. The guide also emphasizes that resulting security recommendations should be cost effective and commensurate with the security risk. The methodology described serves as a foundation for building and maintaining an information security program. In addition to the methodology, the book includes an Appendix that contains questionnaires that can be modified and used to conduct security assessments. This guide is for security professionals who can immediately apply the methodology on the job and also benefits management who can use the methodology to better understand information security and identify areas for improvement.

Trends in Digital Hearing Health and Computational Audiology Faheema Mahomed-Asmail, Karina De Sousa, Laura Coco, 2024-12-11. Traditional hearing health care (HHC) service delivery models focus on face to face clinic based testing requiring several patient visits. Globally, access to these services is challenging, which results in many individuals living with untreated hearing loss, which has pervasive and far reaching consequences. With the shift in healthcare towards mHealth and modern machine learning, there is potential to make HHC accessible through scalable models of care. This can be achieved through low cost hearing devices leveraging smartphone technologies and equipping a larger number of specialists for

medical and surgical management of ear and hearing diseases Furthermore computational auditory models advanced algorithms and the use of artificial intelligence can positively impact the development of new hearing solutions or the optimization of existing ones
