Ir Sensor Based Home Automation:

Home Automation System Using Arduino System Via IR Sensor Akashdeep Singh, Varinder Singh, Gagandeep Singh, 2018-10-07 This work presents the design and model implementation of a novel home automation system applying the Internet of Things IoT technology. It seeks simplified design protocols for developing a robust home automation system to deal with the problems of complexity, multiple incompatible standards, and the resulting expenses in the existing systems. The embedded system features the ubiquitous low cost 32 bit ESP8266 System on chip SoC module interfaced to some sensors and actuators for interaction in the home. Flexibility in the remote access operation and management is achieved through HTML5 based intuitive mobile and web GUI applications. Web Application Messaging Protocol WAMP is deployed to ensure that individual applications and systems seamlessly communicate with a relatively high level of security using robust web service security protocol. This system offers a cost effective and efficient solution excluded which are present mostly in other solutions because the costs of a dedicated public IP address and a high end computer are excluded which are present mostly in other solutions. *Wearable/Personal Monitoring Devices Present to Future* Gaetano D. Gargiulo, Ganesh R.

Naik, 2021-10-26 This book discusses recent advances in wearable technologies and personal monitoring devices covering topics such as skin contact based wearables, electrodes, non contact wearables, the Internet of things IoT, and signal processing for wearable devices. Although it chiefly focuses on wearable devices and provides comprehensive descriptions of all the core principles of personal monitoring devices, the book also features a section on devices that are embedded in smart appliances, furniture, e.g. chairs, which despite their limitations have taken the concept of unobtrusiveness to the next level. Wearable and personal devices are the key to precision medicine, and the medical community is finally exploring the opportunities offered by long term monitoring of physiological parameters that are collected during day to day life without the bias imposed by the clinical environment. Such data offers a prime view of individuals' physical condition as well as the efficacy of therapy and occurrence of events. Offering an in depth analysis of the latest advances in smart and pervasive wearable devices, particularly those that are unobtrusive and invisible, and addressing topics not covered elsewhere, the book will appeal to medical practitioners and engineers alike. **Intelligent Systems Design and Applications** Ajith
