The Impact of the Measures of Academic Progress (MAP) Program on Student Reading Achievement. Final Report. NCEE 2013-4000 David Cordray, Georgine Pion, Chris Brandt, Ayrin Molefe, Megan Toby, 2012 During the past decade the use of standardized benchmark measures to differentiate and individualize instruction for students received renewed attention from educators Although teachers may use their own assessments tests quizzes homework problem sets for monitoring learning it is challenging for them to equate performance on classroom measures with likely performance on external measures such as statewide tests or nationally normed standardized tests One of the most widely used commercially available systems incorporating benchmark assessment and training in differentiated instruction is the Northwest Evaluation Association s NWEA Measures of Academic Progress MAP program The MAP program includes 1 computer adaptive assessments administered to students three or four times a year and 2 teacher training and access to MAP resources on how to use data from these assessments to differentiate instruction MAP tests and training are currently in use in nearly 20 percent of K 12 school districts nationwide and more than a third of districts in the Midwest Although the technical merits and popularity of MAP assessments have been widely referenced in practitioner oriented journals and teacher magazines few studies have investigated the effects of MAP or other benchmark assessment programs on student outcomes This study was designed to address questions from Midwestern states and districts about the extent to which benchmark assessment may affect teachers differentiated instructional practices and student achievement Thirty two elementary schools in five districts in Illinois participated in a two year randomized controlled trial to assess the effectiveness of the MAP program Half the schools were randomly assigned to implement the MAP program in grade 4 and the other half were randomly assigned to implement MAP in grade 5 Schools assigned to grade 4 treatment served as the grade 5 control condition and schools assigned to grade 5 treatment served as the grade 4 control The results of the study indicate that the MAP program was implemented with

moderate fidelity but that MAP teachers were not more likely than control group teachers to have applied differentiated instructional practices in their classes Overall the MAP program did not have a statistically significant impact on students reading achievement in either grade 4 or grade 5 Appended are 1 School and Student Characteristics 2 Impact Estimation and Impact Estimates 3 Results of Sensitivity Analyses 4 Missing Data Imputation Procedures 5 Response Rates on Surveys Logs and Classroom Observations 6 MAP Observation Protocol 7 MAP Instructional Logs 8 MAP Teacher Survey for MAP Teachers 9 MAP Student Engagement Survey 10 MAP School Leader Survey 11 MAP Recruitment Process 12 Assessment of Control Group Contamination and of Integrity of Year 2 Intervention Control Contrast 13 Implementation Fidelity and Achieved Relative Strength and 14 The Achieved Relative Strength Index Contains 6 figures 56 tables 1 box and 98 footnotes

2015 NWEA Measures of Academic Progress Normative Data Northwest Evaluation Association, 2015 By using carefully constructed measurement scales that span grades Measures of Academic Progress MAP interim assessments from Northwest Evaluation Association NWEA offer educators efficient and very accurate estimates of student achievement status within a subject Before achievement test scores can be useful to educators however they need to be evaluated within a context The RIT Scale is a curriculum scale that uses individual item difficulty values to estimate student achievement An advantage of the RIT scale is that it can relate the numbers on the scale directly to the difficulty of items on the tests In addition the RIT scale is an equal interval scale Equal interval means that the difference between scores is the same regardless of whether a student is at the top bottom or middle of the RIT scale and it has the same meaning regardless of grade level To that end 2015 RIT Scale Norms allow educators to compare achievement status and changes in achievement status growth between test occasions to students performance in the same grade at a comparable stage of the school year This contextualizing of student performance 1 helps teachers as they plan instruction for individual students or confer with parents 2 supports school and district administrators as they focus on allocating resources and 3 empowers school staff as they work to improve all educational outcomes The 2015 NWEA RIT Scale Norms Study provides status and growth norms for individual students as well as for schools on each of the four RIT scales Reading Language Usage Mathematics and General Science The study's results are based on K 11 grade level samples Each sample is comprised of 72 000 to 153 000 student test records from approximately 1000 schools These numbers vary by subject These samples were drawn randomly from test record pools of up to 10 2 million students attending more than 23 500 public schools spread across 6 000 districts in 49 states Rigorous procedures were used to ensure that the norms were representative of the U S school age population Since MAP assessments can be administered on a schedule designed to meet a school's needs tests can be administered at any time during the school year The 2015 norms adjust for this scheduling flexibility by accounting for instructional days allowing more valid comparisons for status and growth

Using Reading Curriculum-based Measurements as Predictors for the Measures of Academic Progress (MAP) Standardized Test in Nebraska Karen Merino, 2010

Linking and Aligning Scores and Scales Neil J. Dorans, Mary Pommerich, Paul W. Holland, 2007-10-15 In their preface to the second edition of *Test Equating Scaling and Linking* Mike Kolen and Bob Brennan 2004 made the following observation Prior to 1980 the subject of equating was ignored by most people in the measurement community except for psychometricians who had responsibility for equating p vii The authors went on to say that considerably more attention is now paid to equating indeed to all forms of linkages between tests and that this increased attention can be attributed to several factors 1 An increase in the number and variety of testing programs that use multiple forms and the recognition among professionals that these multiple forms need to be linked 2 Test developers and publishers in response to critics often refer to the role of linking in reporting scores 3 The accountability movement and fairness issues related to assessment have become much more visible Those of us who work in this field know that ensuring comparability of scores is not an easy thing to do Nonetheless our customers the test takers and score users either assume that scores on different forms of an assessment can be used interchangeably or like the critics above ask us to justify our comparability assumptions And they are right to do this After all the test scores that we provide have an impact on decisions that affect people's choices and their future plans From an ethical point of view we are obligated to get it right

Using Measures of Academic Progress (MAP), AIMSweb, Universal Screening Assessment, Poverty Level, and English Language Proficiency as Predictors of Fourth Graders' Math Scores in Nebraska Jennifer K. Sullivan, 2012

Computerized Benchmark Assessments Sarah Marie Brewer, 2014 This quantitative nonequivalent group causal comparative research study was designed to determine to what extent Measures of Academic Progress MAP benchmark assessments in the areas of reading and mathematics influence achievement scores of fourth grade students in two school districts located in southeast and northwest regions of a Western state The research design included the use of a comparison group that did not receive benchmark assessments prior to taking their end of year achievement assessments An analysis of approximately 400 student records from the Criterion Referenced Test CRT reading and mathematics standardized assessment specifically the research question regarding the relationship between student achievement scores on the MAP reading and mathematics benchmark assessments and the student achievement scores on the corresponding CRT assessments Testing of the associated hypotheses resulted in the conclusion that in this study there was no conclusive evidence that benchmark assessments had an impact on CRT scores in reading or math for fourth grade students in these schools However this work contributes to the body of quantitative research examining the impacts of benchmark assessments and does have practical implications as well as implications for future research
