

## INSTRUCTIONS

# LIONEL TYPE ZW TRANSFORMER

115 VOLTS

60 CYCLES

275 WATTS

ALTERNATING CURRENT ONLY

## INTRODUCTION

Lionel electric trains operate on low voltage, ranging from 6 to 18 volts. Lionel Transformers reduce or increase the available house voltage to the low voltage required. The plug at the end of the transformer cord is plugged into any standard wall outlet of 115 volts, 60 cycles alternating current. The low voltage for operating trains and accessories is then obtained from the output terminals at the rear of the transformer.

The voltage rating of the "ZW" Transformer is 275 watts. The wattage of a transformer is a measure of its capacity in doing its house power. The wattage of the transformer you need is governed by the kind and number of trains and the number of lights and operating accessories in your model railroad system. The larger the trains and the greater the number of accessories, the more power you need and the higher should be the voltage rating of the transformer.
