Installation Instructions For

#3000 Remote Operated Electric Fill Valve with #2 Fill Port and Automatic Water Level Control, Automatic Heating and Low Water Cut-Off Protection for Heater and Pump

Locate and drill 2" diameter hole 6" up from the bottom of the baptistry at any convenient place around the baptistry. Smooth hole and install chrome faced, flush, fill port (model #2) using gasket and locknut. Apply clear silicone sealant under chrome flange (rubber gasket goes on outside of baptistry). Remove any outside insulation so fill port rubber gasket fits against fiberglass wall. This fill system is generally installed on the back side or on either end in an accessible location. The lower the fill port is located, the less the filling noise; due to the port being under water. A back flow preventer is installed up stream of the solenoid fill valve to prevent any back flow of baptistry water under normal conditions. A 3/4" manually operated hand valve is installed up stream of the back flow preventer. Relocate valve further up stream if necessary to provide accessibility.

Note: Deck and wall spouts of other styles can be supplied in place of the flush fill port (model #2).
A 1/8" hole would need to be drilled.

Note: Fittings and Nipples are not made up water tight. Use Teflon tape on male threads. Tighten the backflow preventer hand tight, then another one-half turn. Tightening the plastic backflow preventer too tight may cause it to crack.

Water Level Sensor (Model # 731) Installation

Locate and drill a 1/8" diameter hole 14" below the rim of the baptistry at any convenient location. For easier installation locate as near as possible to the solenoid fill valve. Smooth hole and install using same method as fill port (above). Remove any insulation to allow rubber gasket to fit against fiberglass wall. Plastic PVC fittings provide necessary air chamber for proper operation of pressure sensor.

Install Little Giant Circulation heater, pump and pump installation kit according to instructions included with this equipment.

Wire according to drawing on back.

Operation

When the hand switch is turned on the solenoid fill valve opens allowing the baptistry to fill with water through the fill port. If water flow is very slow check the screen on the inlet side of the water valve. Clean if necessary.

When a water level of 4" above the water level sensor is reached, the sensor opens its contacts and breaks the circuit, thus turning off the water solenoid fill valve. The water level will be approximately 10" below the baptistry rim; or 3" to 4" below the overflow.

The normally open contacts in the sensor close and both heater and pump are turned on through the contactor. Water will be heated until the setting on the heater's thermostat is reached. The thermostat then turns both pump and heater off.

Should the water in the baptistry cool below the heater's thermostat setting, the heater and pump will automatically turn on until the baptistry water is reheated.
