## HAY DRYING SYSTEMS

### LISTER MULTI BAY HAY DRYING SYSTEM WITH OUTSIDE MAIN AIR DUCT SERVING VENTA FLOORS IN EACH BAY

A more flexible system than the single bay tunnel because stacking and drying proceed at a faster rate and any combination of bays can be dried simultaneously without moving the Lister unit. Drying starts as soon as the third layer of bales has been stacked and continues as further loadings are added until the first bay is full to eaves. The second bay can then be stacked and bays 1 and 2 dried simultaneously. Air doors inside the main air duct open and shut off the air to each bay. When bay No. 2 is full, bay No. 3 can be loaded and so on until all the bays are full, after which the air control doors are used to ensure that the air is opened up to those bays which still require finishing.

#### Materials

Main air duct is made either in concrete blocks and concrete roof or plywood, but for portable main air ducts canvas is being used and is quite satisfactory. Quotations for canvas ducts are available on request. Venta floors are usually made up in 5 ft. wide by 5 ft. long sections laid on concrete blocks on end. The 4 ft. inlet part of the venta floor is covered top and sides by plywood to prevent air coming out until 4 ft. inside the stack.
