Environmental Monitoring using GNSS Joseph L. Awange,2012-05-15 Global Navigation Satellite Systems GNSS are revolutionizing the world in a way their original developers never envisaged From being military war tools GNSS satellites are rapidly becoming peace tools that play a potentially critical role in enabling changing environmental phenomenon that do not permit direct measurements to be remotely observed via their all weather highly accurate and continuously updatable positional time series This is evident for example in their use in emerging environmental monitoring methods that are considered in this book These include GPS based radio telemetry which is enhancing ecological and conservation monitoring by more accurately mapping animal movements their behaviours and their impact on the environment GNSS meteorology which is contributing to weather and climate change studies GNSS remote sensing which for example allows the rapid monitoring of changes in fresh water resources and cryosphere Geosensor network techniques which are earning a crucial role in disaster response management Epidemiology for improved efficiency in tracking and studying the spread of infectious

diseases and climate change effects on vector borne diseases and Economics to provide data for the econometric modelling of casual impact of policies In Environmental Impact Assessments EIA Strategic Environmental Assessments SEA and Sustainability Assessments SA GNSS together with other spaced based remote sensing techniques are emerging not only as modern tools that connect the developers to the community but also provide information that support Multi Criteria Analysis MCA methods which inform decision making and policy formulations By bringing the two fields of geodesy the parent of GNSS technology and environmental studies potential users of this technology this book presents the concepts of GNSS in a simplified way that can on the one hand be understood and utilised by environmentalists while on the other outlines its potential applications to environmental monitoring and management for those engaged more with its technology which hopefully will further energise the already innovative research that is being carried out Lastly this book is most relevant to all the professionals whose work is related to the environment such as hydrologists meteorologists epidemiologists economist and engineers to name just a few A comprehensive yet candid and compelling presentation of Global Navigation Satellite Systems and its application to environmental monitoring and a host of other socio economic activities This is an essential and new ground breaking reading for all professional practitioners and even academics seeking to study and become involved in using Global Navigation Satellite Systems in diverse fields ranging from environmental monitoring to economic activities such as monitoring weather and climate in order to design crop failure insurance Nathaniel O Agola Professor of Business and Financial Economics Ritsumeikan University Japan

Applied Multivariate Statistics in Geohydrology and Related Sciences Charles E. Brown, 1998-01-19 It has been evident from many years of research work in the geohydrologic sciences that a summary of relevant past work present work and needed future work in multivariate statistics with geohydrologic applications is not only desirable but is necessary This book is intended to serve a broad scientific audience but more specifically is geared toward scientists doing studies in geohydrology and related geo sciences Its objective is to address both introductory and advanced concepts and applications of the multivariate procedures in use today Some of the procedures are classical in scope but others are on the forefront of statistical science and have received limited use in geohydrology or related sciences The past three decades have seen a significant jump in the application of new research methodologies that focus on analyzing large databases With more general applications being developed by statisticians in various disciplines multivariate quantitative procedures are evolving for better scientific application at a rapid rate and now provide for quick and informative analyses of large datasets The procedures include a family of statistical research methods that are alternatively called multivariate analysis or multivariate statistical methods
