Gunn, 1996 *Online Education* Linda M. Harasim, 1990-01-19 Written for educators and education professionals this groundbreaking volume offers a comprehensive introduction to educational computer mediated communication CMC As editor Linda Harasim notes at the outset although online education already exists as a field of practice there is a critical need now to build a research discipline and knowledge base to guide research developments in the field Online Education fills this need by presenting theoretical frameworks design paradigms and research methodologies for analyzing and shaping this new field of educational activity In one volume the contributors provide a range of perspectives and approaches for understanding the educational applications of such innovations as electronic mail and computer conferencing networks The final chapter provides an extensive bibliography making this an extremely valuable resource for researchers developers and educators working on educational CMC Divided into three sections the chapters address the questions posed by educational CMC from the perspectives of theory design and methodology in turn Each contribution is written by one of the leading theoreticians or practitioners in the field and although the volume represents a rich diversity of approaches common themes link the chapters The contributors emphasize that online education is a new environment with new attributes that requires new approaches to understand design and implement it They focus particular attention on the essentially group or socially interactive nature of the online educational environment as the conceptual basis for research and design and explore the augmented environment that the computer provides for educational activity Finally each looks at fundamental practical issues What are the effective uses of these new computer mediated communication media Can we simply transfer existing conventional instructional practices or do we need to develop a new set of practices better suited to the new tools An Integrated Environment for Problem Solving and Program Development Fadi Pierre Deek, 1997 A framework for an integrated problem solving and program development environment that addresses the needs of students learning programming is proposed Several objectives have been accomplished defining the tasks required for program

development and a literature review to determine the actual difficulties involved in learning those tasks A comprehensive Study of environments and tools developed to support the learning of problem solving and programming was then performed covering programming environments debugging aids intelligent tutoring systems and intelligent programming environments This was followed by a careful analysis and critique of these systems which uncovered the limitations that have prevented them from accomplishing their goals Next an extensive study of problem solving methodologies developed in this century was carried out and a common model for problem solving was produced The tasks of program development were then integrated with the common model for problem solving Then the cognitive activities required for problem solving and program development were identified and also integrated with the common model to form a Dual Common Model for problem Solving and Program Development This dual common model was then used to define the functional specifications for a problem solving and program development environment which was designed implemented tested and integrated into the curriculum The development of the new environment for learning problem solving and programming was followed by the planning of a cognitively oriented assessment method and the development of related instruments to evaluate the process and the product of problem solving A detailed statistical experiment to study the effect of this environment on students problem solving and program development skills including system testing by protocol analysis and performance evaluation of students based on research hypotheses and questions was also designed implemented and the result reported
